

THE LANCET

Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed. We post it as supplied by the authors.

Supplement to: Allemani C, Weir HK, Carreira H, et al, and the CONCORD Working Group. Global surveillance of cancer survival 1995–2009: analysis of individual data for 25 676 887 patients from 279 population-based registries in 67 countries (CONCORD-2). *Lancet* 2014; published online Nov 26. [http://dx.doi.org/10.1016/S0140-6736\(14\)62038-9](http://dx.doi.org/10.1016/S0140-6736(14)62038-9).

Supplementary appendix

Web-table 1	p2	Definition of adult and childhood leukaemia
Web-table 2	p3	Data quality indicators, patients diagnosed 1995-2009: for all cancers combined, and for adults (15-99 years) diagnosed with one of 10 common malignancies and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL), by continent, country and registry
Web-table 3	p64	Population coverage and number of patients available for survival analyses, by continent, country and registry - patients diagnosed during 1995-2009
Web-table 4	p81	Five-year age-standardised net survival (%): adults (15-99 years) diagnosed with one of 10 common malignancies and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL), by continent, country, registry and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009)
Web-figure 1	p112	Participating countries and regions: 28 detailed maps
Web-figure 2	p141	Global distribution of age-standardised five-year net survival (%), adults (15-99 years) diagnosed with one of nine common malignancies, and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL) by continent, country and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009)
Web-figure 3	p152	Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed with one of nine common malignancies, and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL) during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country
Web-figure 4	p163	Range of five-year age-standardised net survival (%), adults (15-99 years) diagnosed with one of nine common malignancies, and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL) by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009)
Web-annex 1	p174	Structure of survival analyses, patients diagnosed 1995-2009
Web-annex 2	p175	Life expectancy at birth (e_0 , years), by sex, in the general population of 67 countries and 279 participating registries: change between the earliest year for which incidence data were submitted and the last year of follow-up

Web-table 1: Definition of adult and childhood leukaemia

HAEMACARE group

No.	Description	ICD-O-3 morphology codes
6	Chronic lymphocytic leukaemia and small lymphocytic lymphoma	9670; 9823
11	Burkitt leukaemia/lymphoma	9687; 9826
15	Precursor-cell lymphoblastic leukaemia and precursor-cell lymphoblastic lymphoma	9727; 9728; 9729; 9835; 9836; 9837
17	Mature B-cell leukaemia	9833
18	Mature B-cell leukaemia, hairy cell	9940
19	Lymphatic leukaemia, NOS	9820; 9832
20	Leukaemia, NOS	9800; 9801; 9805
21	Myeloid leukaemia, NOS	9860
22	Acute myeloid leukaemia	9840; 9861; 9866; 9867; 9870; 9871; 9872; 9873; 9874; 9891; 9895; 9896; 9897; 9910; 9920; 9930; 9931; 9984; 9987

NOS: Not otherwise specified

Group 15 was used to define precursor-cell (acute) lymphoblastic leukaemia (ALL) in children

Web-table 2

Data quality indicators, patients diagnosed 1995-2009: for all cancers combined, and for adults (15-99 years) diagnosed with one of 10 common malignancies and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL), by continent, country and registry:

- All cancers combined
- Stomach
- Colon
- Rectum
- Liver
- Lung
- Breast
- Cervix
- Ovary
- Prostate
- Leukaemia in adults
- Acute lymphoblastic leukaemia in children

* Data with 100% coverage of the national population.

† Data with 100% coverage of the national population for childhood leukaemia only.

‡ **America (Central and South): Brazil, Brasília Childhood:** this registry covers all of the Federal District.

Asia: Korea: Republic of Korea.

Europe: *France, Burgundy (digestive)*: data only for Côte-d'Or département; *Germany, North Rhine-Westphalia*: data only for the district of Münster; *Poland, Kielce*: this registry covers all of the Świętokrzyskie voivodeship (province); *Russia*: Russian Federation; *Spain Childhood*: data only for the province of Barcelona; *UK Childhood*: data only for England and Wales; *UK (England)*: the 8 regional registries have now merged into a single national registry, and survival estimates are reported for 9 geographic regions (web-figure 1.26).

¶ **In situ** malignancy (ICD-O-3 behaviour code 2): some registries do not register *in situ* cancers; other registries did not submit them.

Other: records with incomplete data, or for tumours that are benign (behaviour code 0), of uncertain behaviour (1), metastatic from another organ (6), or unknown if primary or metastatic (9); or for patients with age outside the range 0-14 years (children) or 15-99 years (adults); or other conditions (see text).

|| **DCO:** tumours registered from a death certificate only (DCO), or detected solely at autopsy.

na: not available (cancer registrations are not initiated solely from a death certificate or autopsy).

Other: vital status or sex unknown; invalid sequence of dates; inconsistency of sex-site, site-morphology, age-site, age-morphology, or age-site-morphology.

†† **MV:** microscopically verified. Non-specific morphology (solid tumours only): ICD-O-3 morphology code in the range 8000-8005.

Censored: patients diagnosed during 1995-2004, with last known vital status "alive", but less than five years of follow-up.

na: data not available for the first two calendar periods

Web-table 2 Data quality indicators, patients diagnosed 1995-2009: for all cancers combined, and for adults (15-99 years) diagnosed with one of 10 common malignancies and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL), by continent, country and registry - ALL CANCERS COMBINED

Web-table 3

Population coverage and number of patients available for survival analyses, by continent, country and registry - patients diagnosed during 1995-2009:

- All calendar periods 1995-2009
- 1995-1999
- 2000-2004
- 2005-2009

* Data with 100% coverage of the national population.

† Data with 100% coverage of the national population for childhood leukaemia only.

‡ Population for females only.

¶ National populations for 2009 from United Nations Population Division, or national authorities (Canada, Portugal, the UK), or the cancer registry.

|| America (Central and South): **Brazil, Brasília Childhood**: this registry covers all of the Federal District.

Asia: **Korea**: Republic of Korea.

Europe: **France, Burgundy (digestive)**: data only for Côte-d'Or département; **Germany, North Rhine-Westphalia**: data only for the district of Münster; **Poland, Kielce**: this registry covers all of the Świętokrzyskie voivodeship (province); **Russia**: Russian Federation; **Spain Childhood**: data only for the province of Barcelona; **UK Childhood**: data only for England and Wales; **UK (England)**: the 8 regional registries merged into a single national registry in 2013. Survival estimates are reported for 9 standard geographic regions (web-figure 1.26).

Web-table 4

Five-year age-standardised net survival (%): adults (15-99 years) diagnosed with one of 10 common malignancies and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL), by continent, country, registry and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009):

- Stomach to Lung
- Breast to Acute lymphoblastic leukaemia in children

Survival estimates that are not age-standardised are italicised. Where small numbers of patients required merging of data between calendar periods of diagnosis, the estimates are underlined (see text). Follow-up was shorter than five years for six registries: Libya (Benghazi); The Gambia; Argentina (Mendoza); China (Lianyungang); Indonesia (Jakarta); Colombia (Manizales: stomach, colon, breast, cervix, prostate).

* Data with 100% coverage of the national population.

† Data with 100% coverage of the national population for childhood leukaemia only.

‡ America (Central and South): **Brazil, Brasília Childhood:** this registry covers all of the Federal District.

Asia: **Korea:** Republic of Korea.

Europe: **France, Burgundy (digestive):** data only for Côte-d'Or département; **Germany, North Rhine-Westphalia:** data only for the district of Münster; **Poland, Kielce:** this registry covers all of the Świętokrzyskie voivodeship (province); **Russia:** Russian Federation; **Spain Childhood:** data only for the province of Barcelona; **UK Childhood:** data only for England and Wales: Scotland provided data separately; **UK (England):** the 8 regional registries have now merged into a single national registry, and survival estimates are reported for 9 geographic regions (web-figure 1.26).

§ Survival estimate considered less reliable (see text).

Web-table 4 Five-year age-standardised net survival (%): adults (15-99 years) with one of 10 common malignancies and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL), by continent, country, registry and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009)

Web-figure 1.28: Acute lymphoblastic leukaemia in childhood

Web-figure 2

Global distribution of age-standardised five-year net survival (%), adults (15-99 years) diagnosed with one of nine common malignancies, and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL) by continent, country and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009):

- Stomach
- Colon
- Rectum
- Liver
- Lung
- Cervix
- Ovary
- Prostate
- Leukaemia in adults
- Acute lymphoblastic leukaemia in children

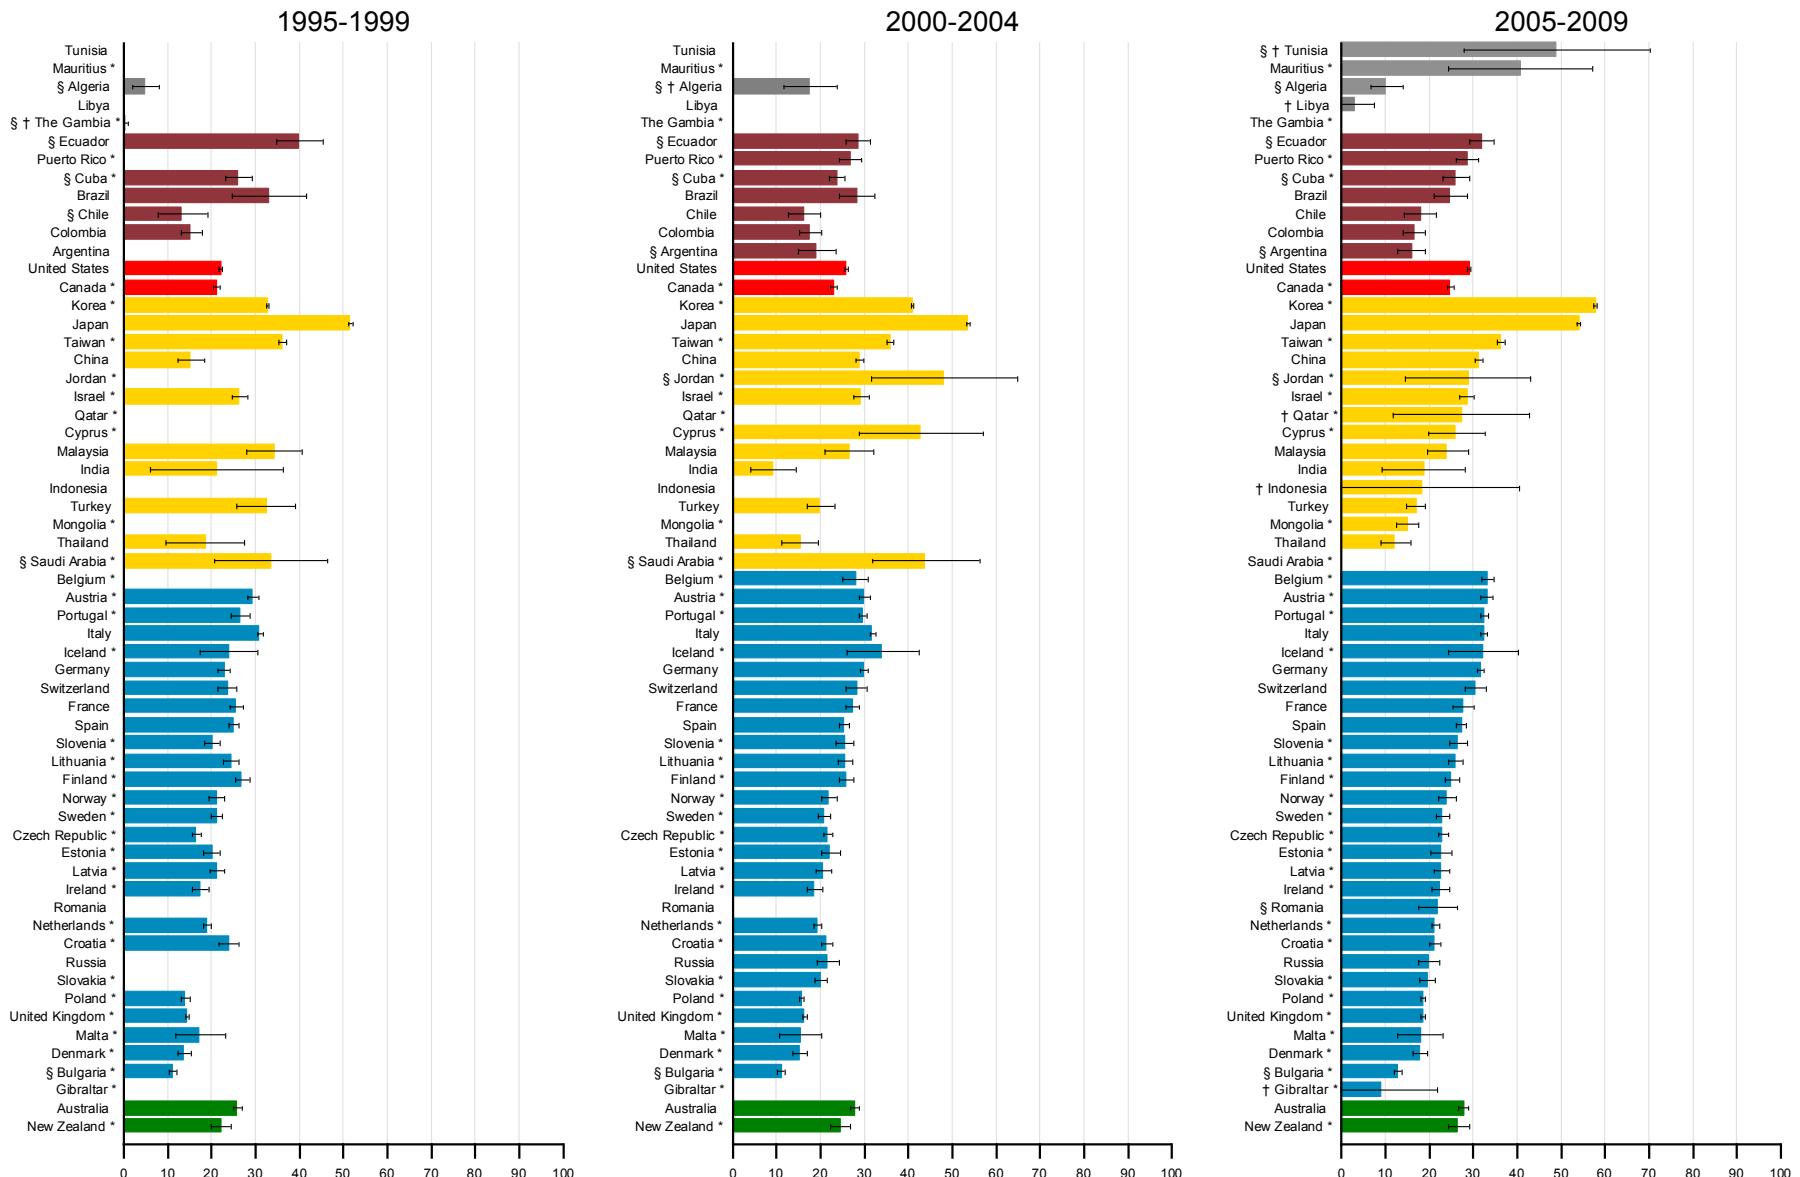

Survival estimates for each country are ranked from highest to lowest within each continent; for ease of reference, the ranking for 2005-2009 is also used for 1995-1999 and 2000-2004. Where data were available for more than one registry in a given country, the survival estimates are derived by pooling the data for that country, excluding data from registries for which the estimates are considered less reliable (see text).

* Data with 100% coverage of the national population.

† National estimate not age-standardised (see text).

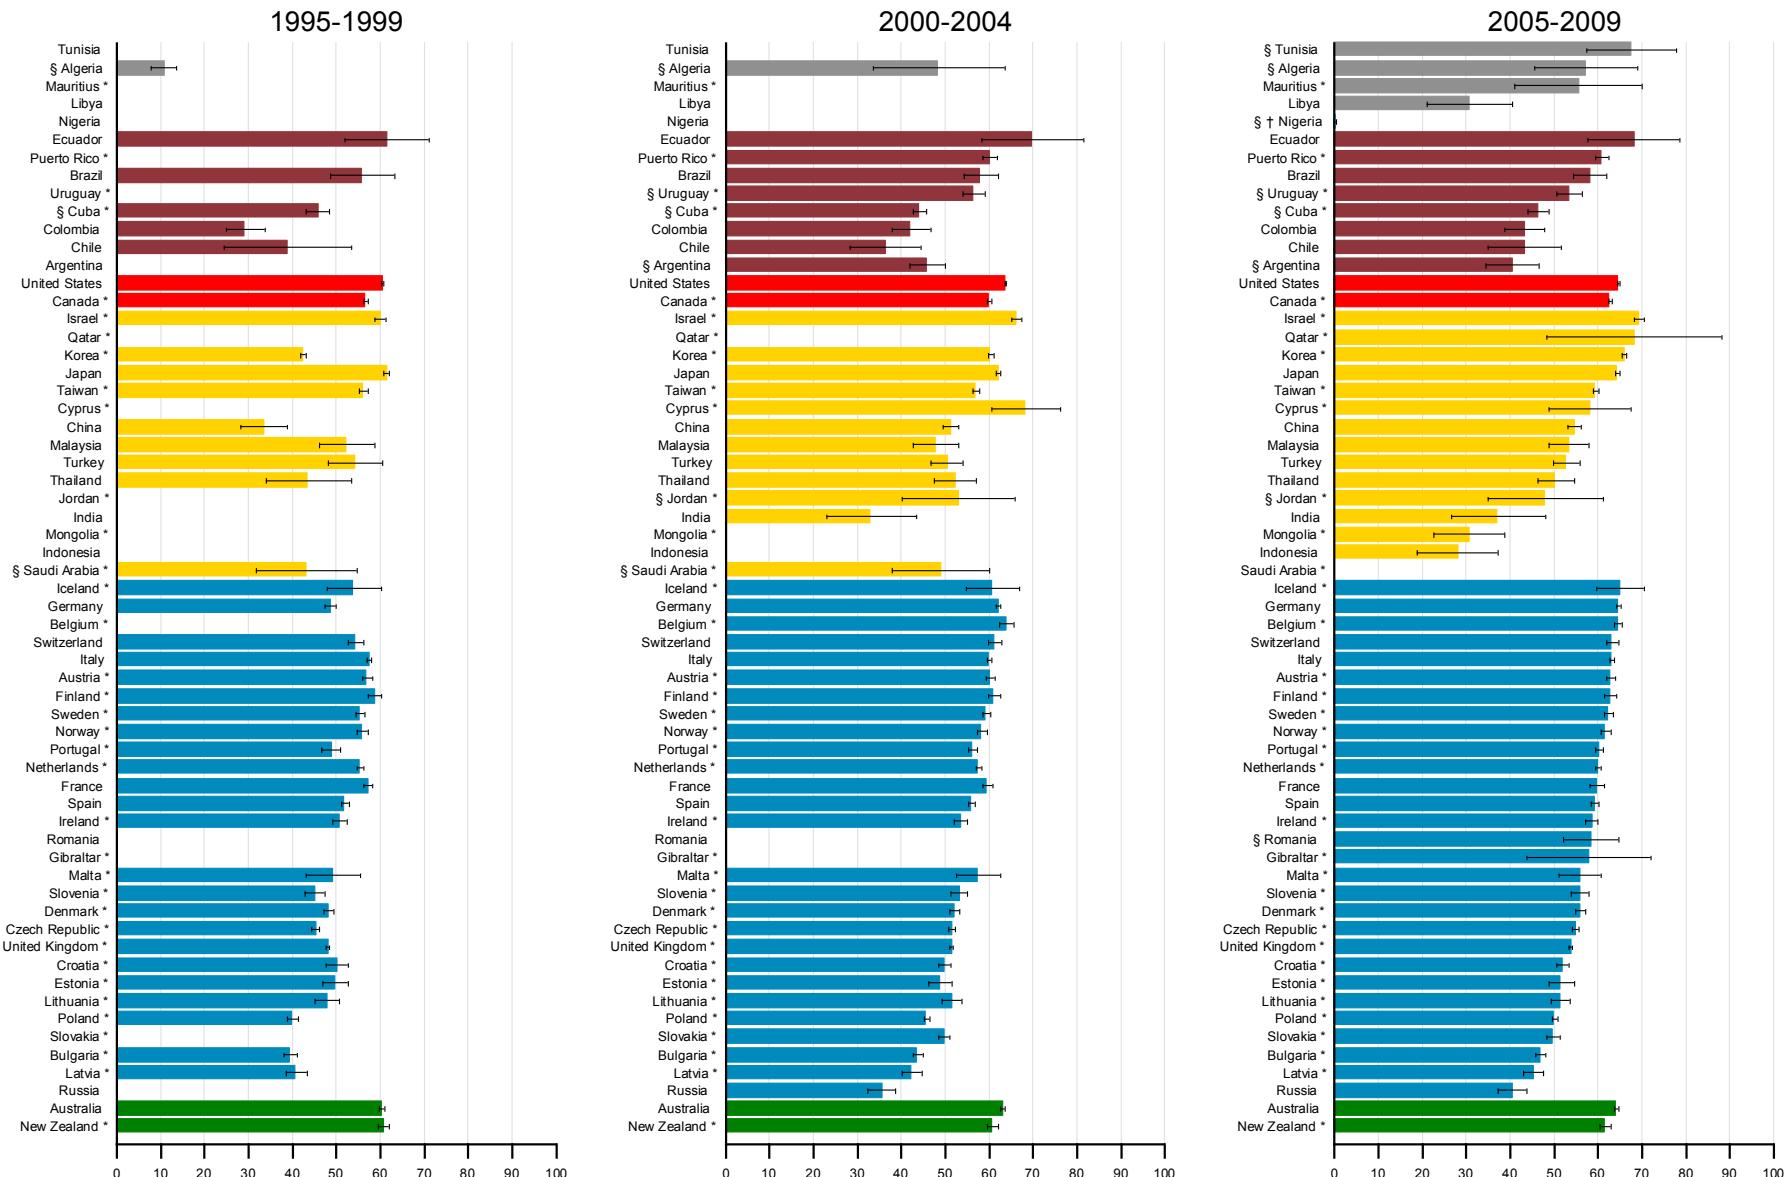

§ National estimate flagged as less reliable because the only data available are from a registry or registries in this category (see text).

Web-figure 3

Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed with one of nine common malignancies, and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL) during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country:

- Stomach
- Colon
- Rectum
- Liver
- Lung
- Cervix
- Ovary
- Prostate
- Leukaemia in adults
- Acute lymphoblastic leukaemia in children

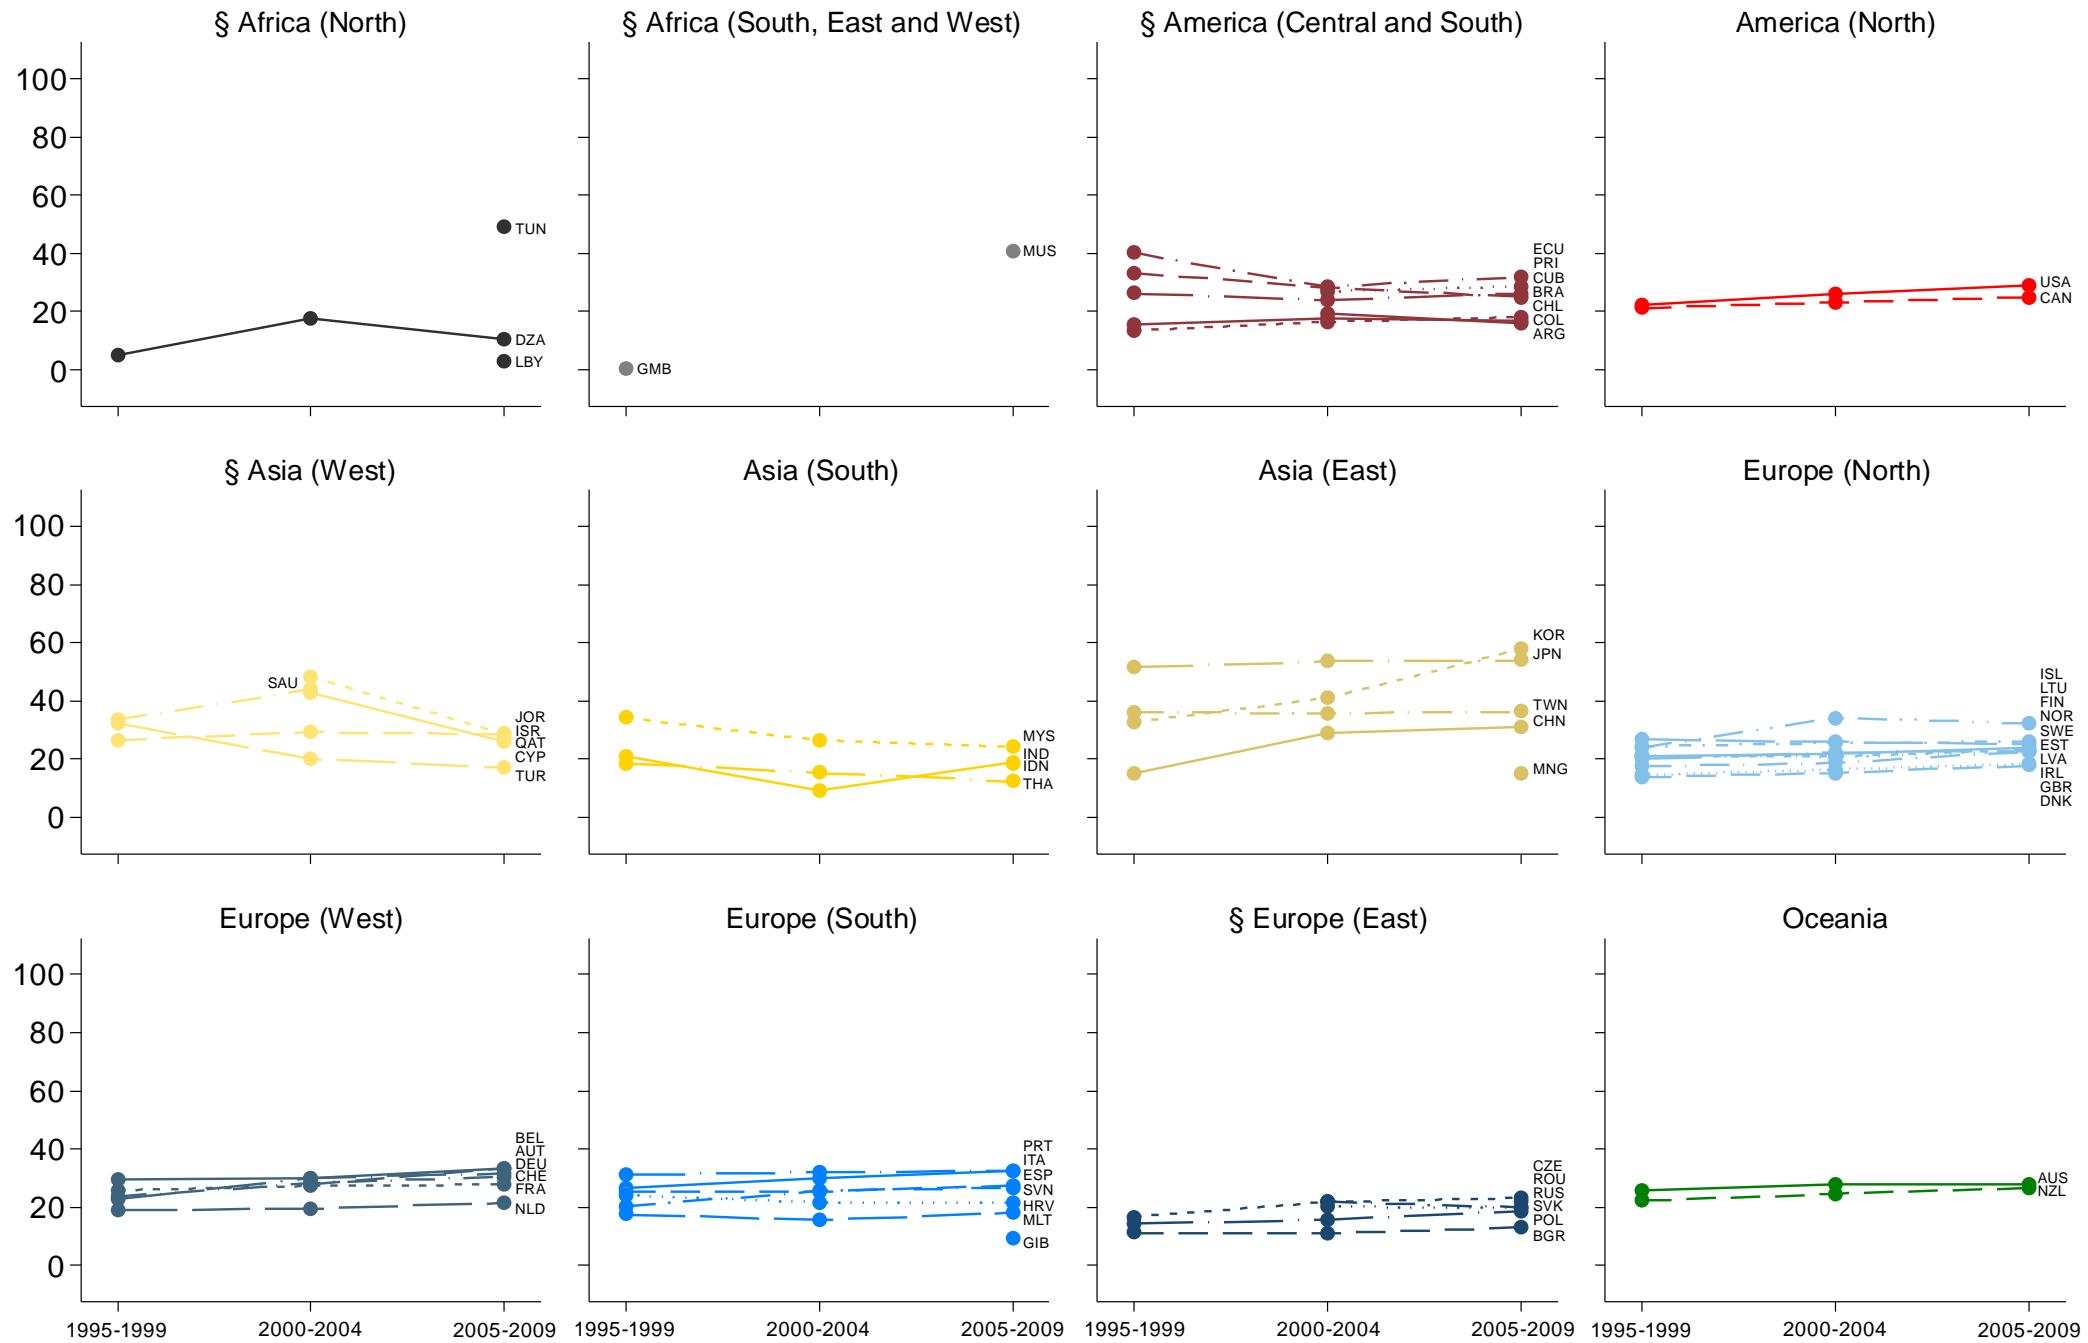

Where data were available for more than one registry in a given country, the survival estimates are derived by pooling the data for that country, but excluding data from registries for which the estimates for a given cancer are considered less reliable (see text).

§ Continent or continental region with one or more national estimates flagged as less reliable.

Web-figure 3: Stomach cancer – Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

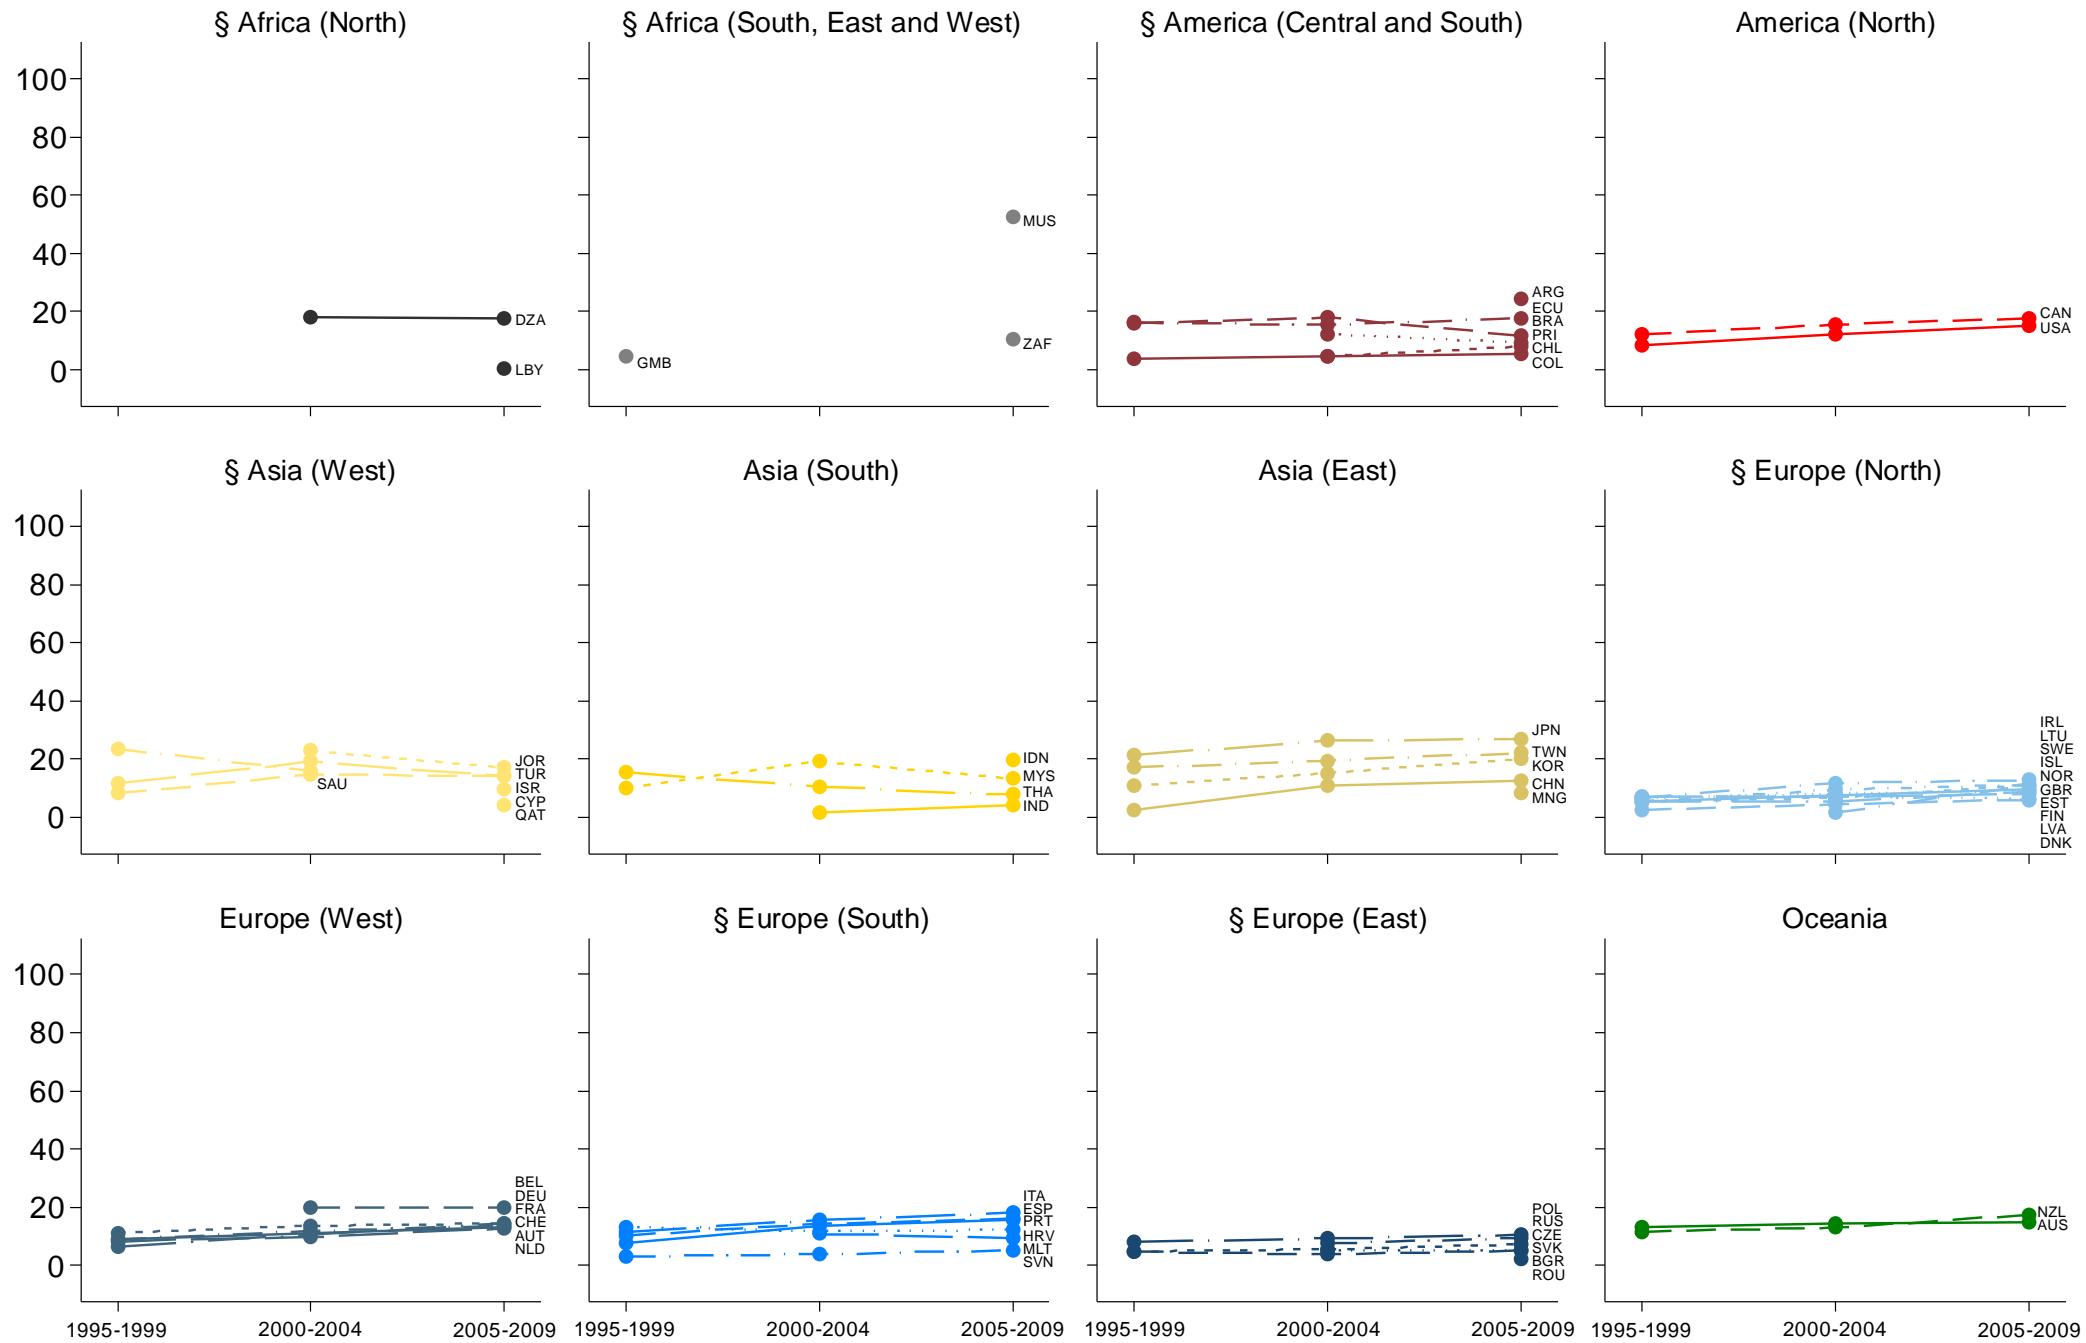

Web-figure 3: Colon cancer – Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

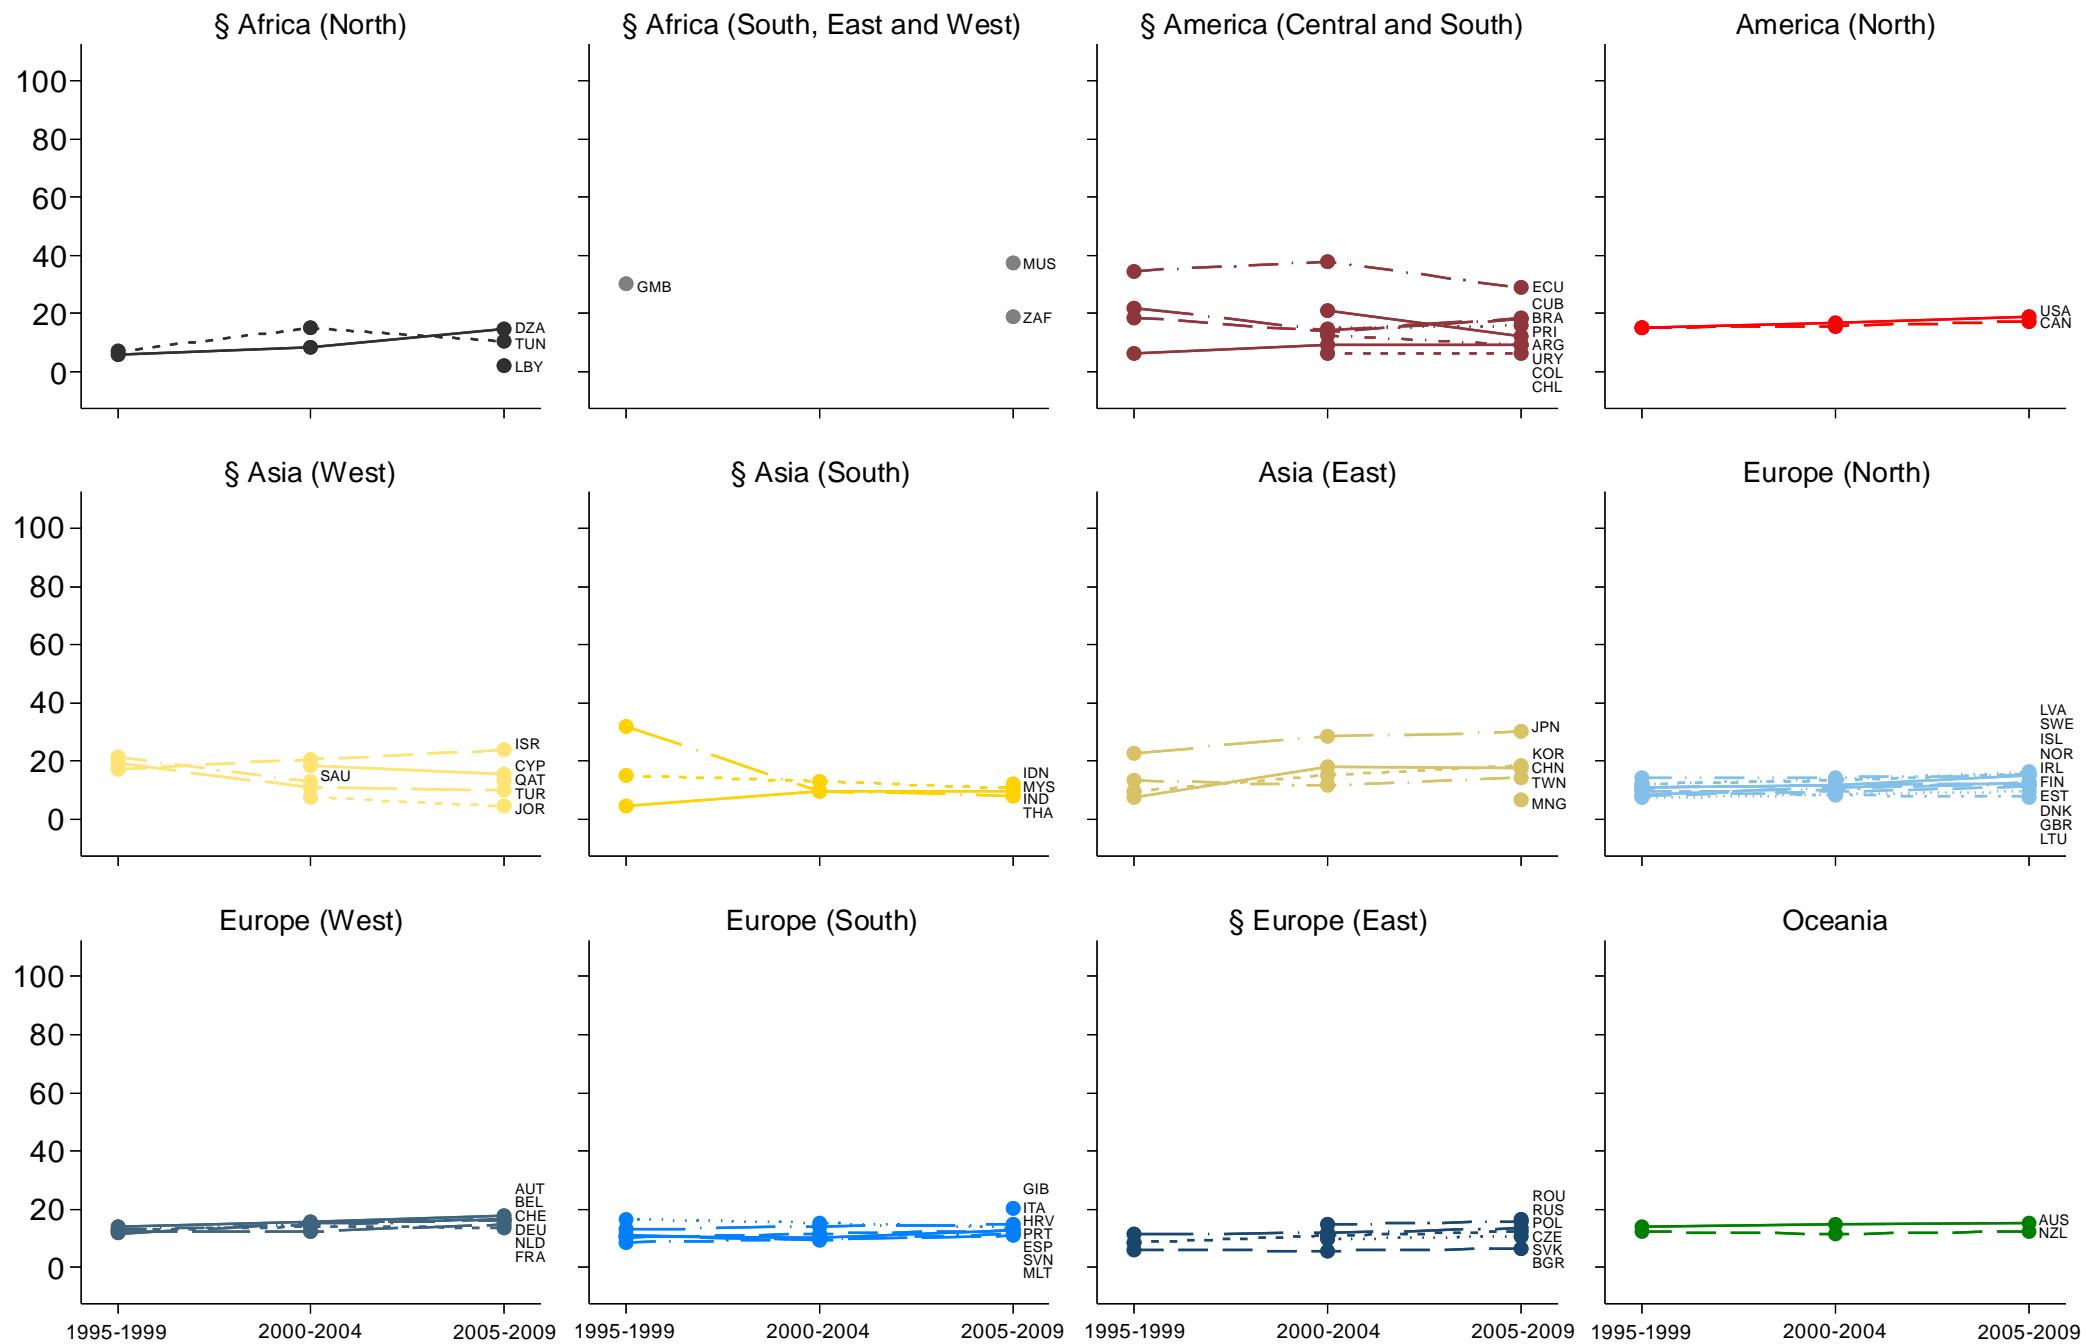

Web-figure 3: Rectal cancer – Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

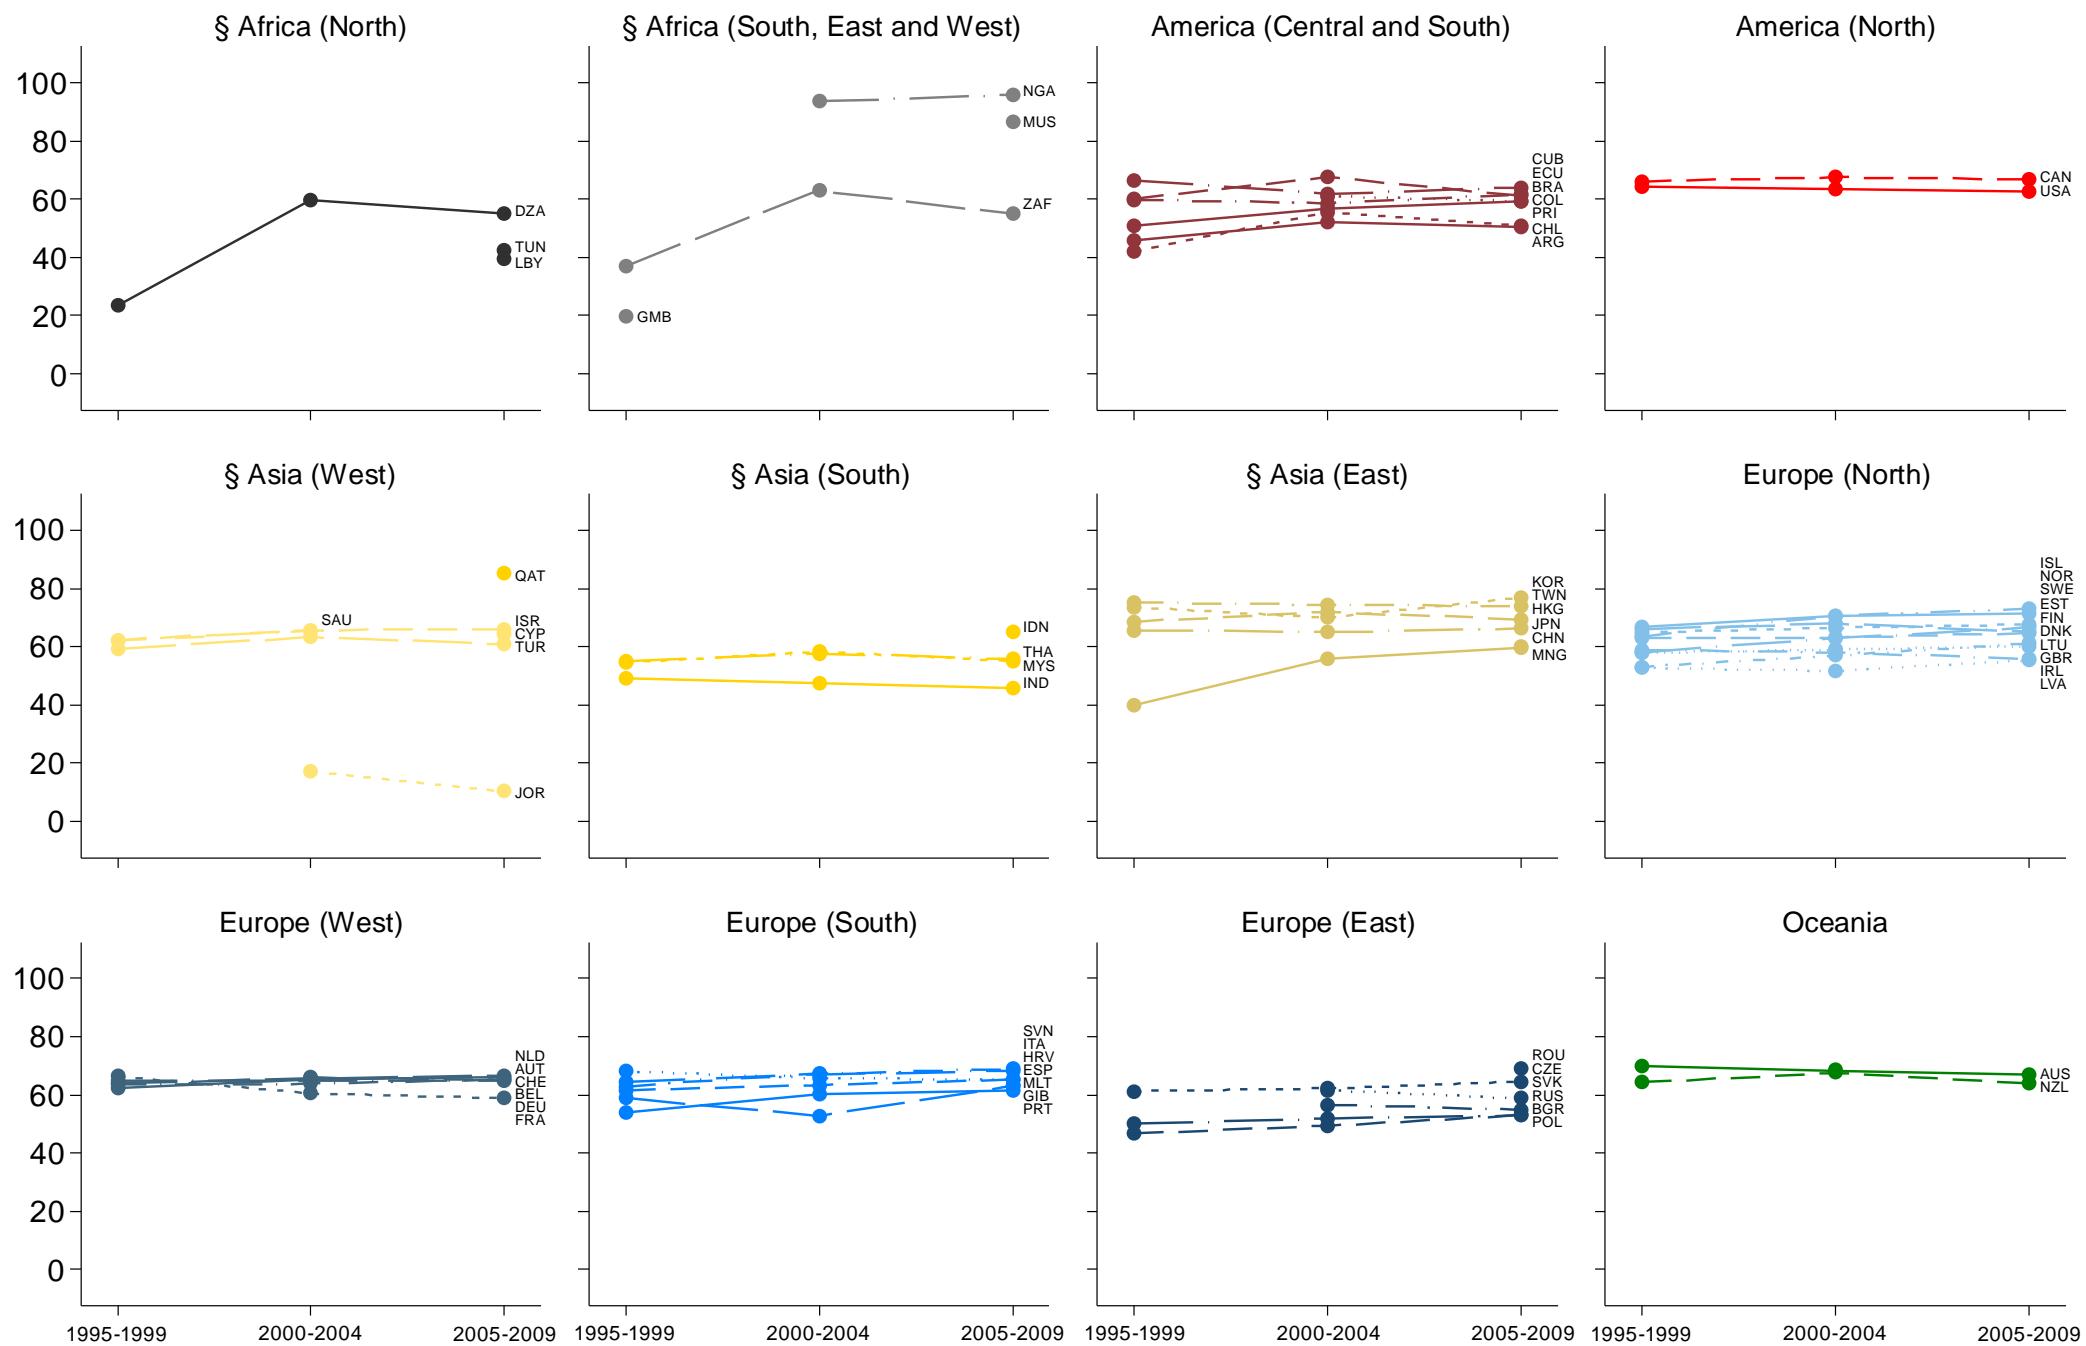

Web-figure 3: Liver cancer – Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

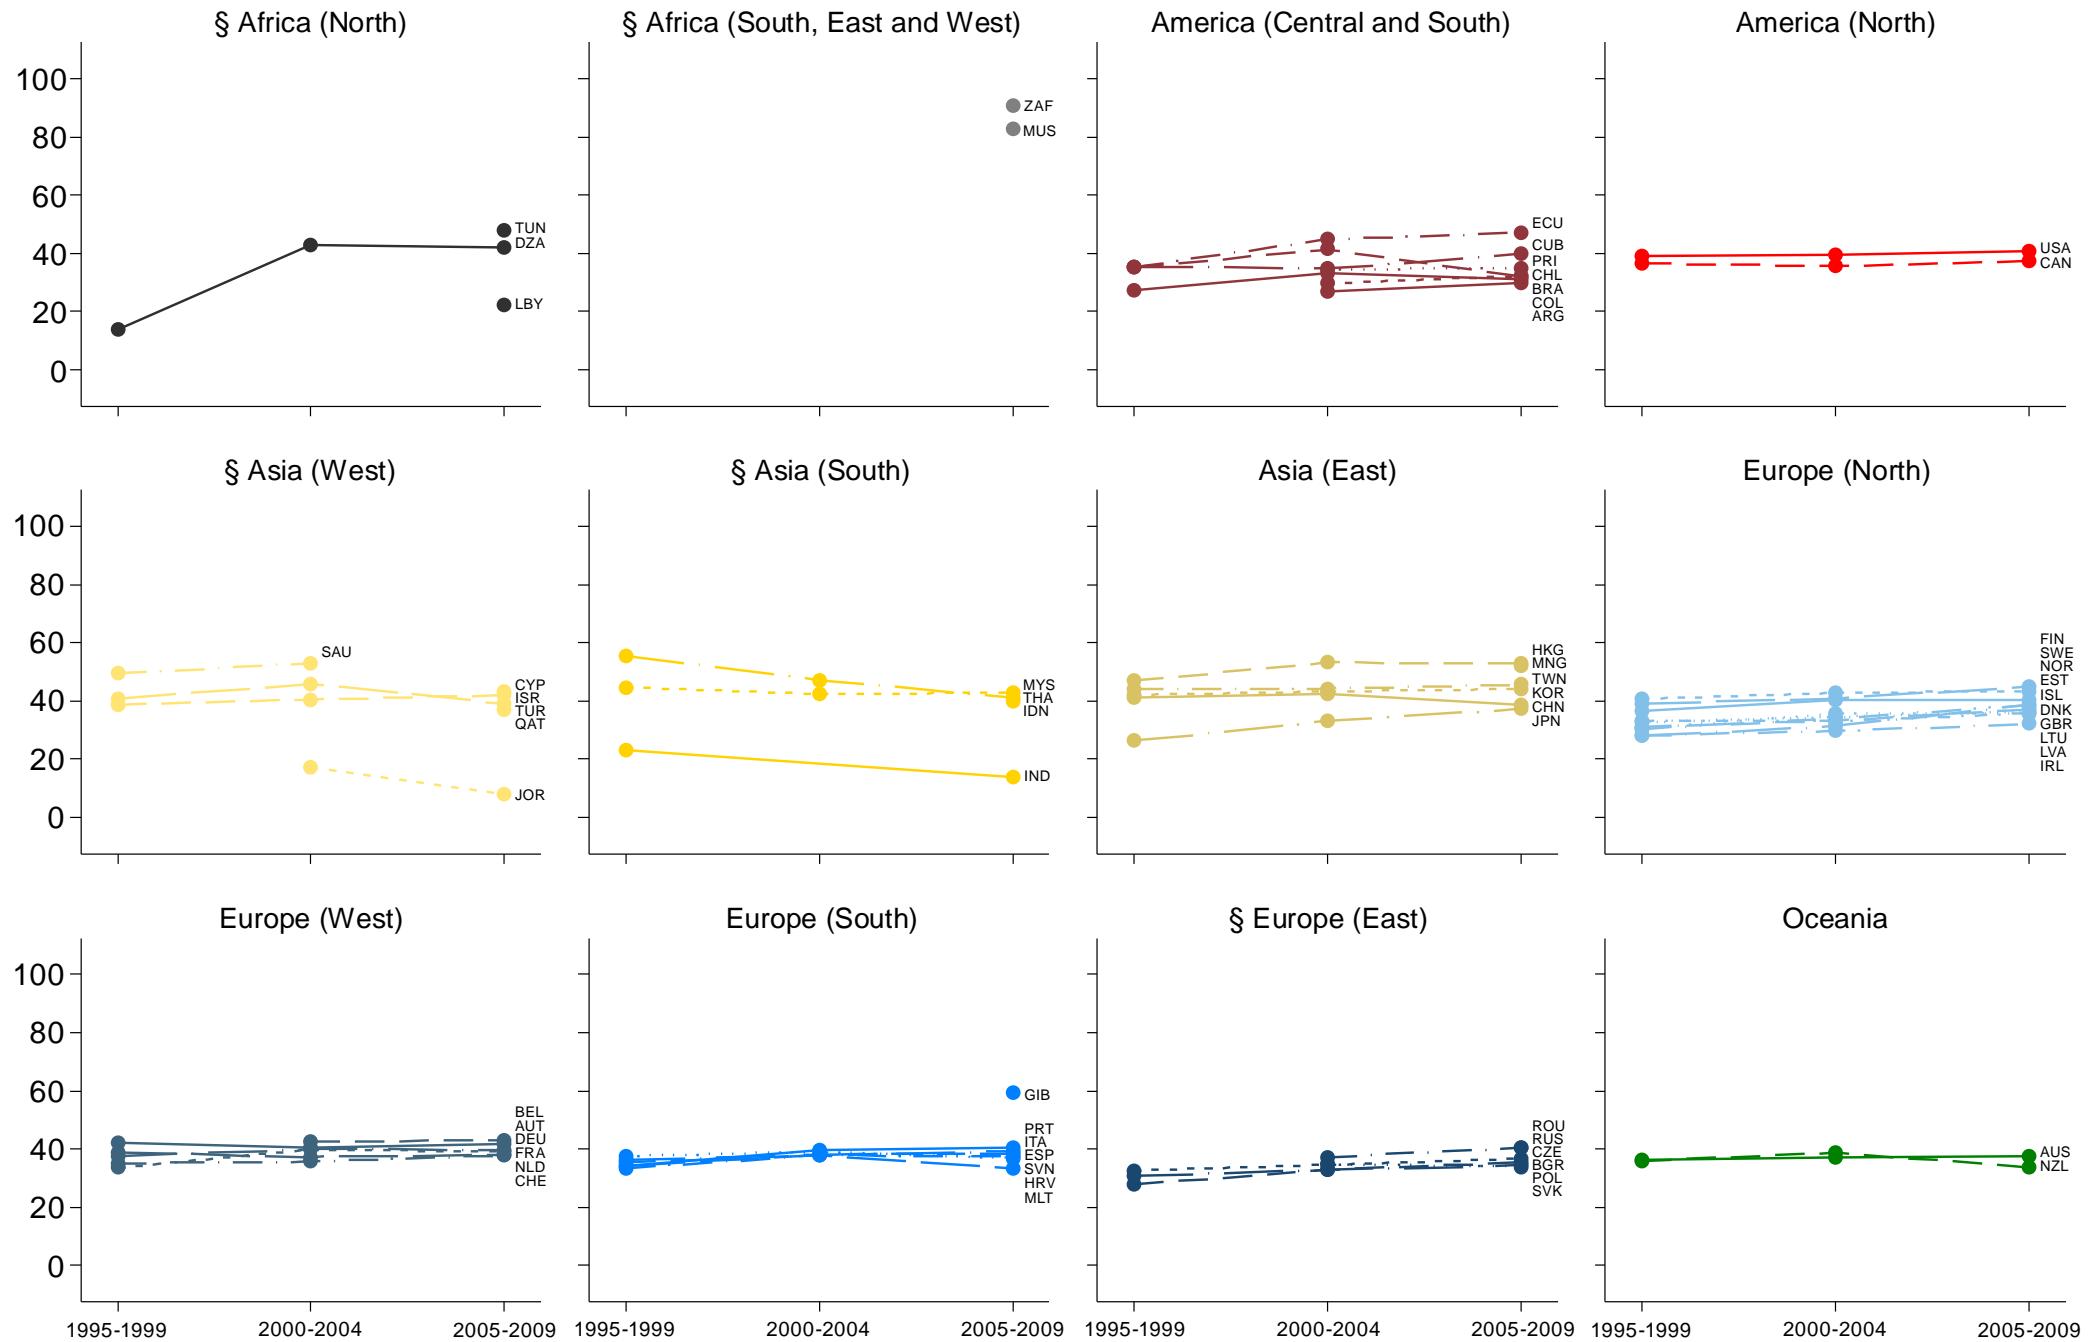

Web-figure 3: Lung cancer – Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

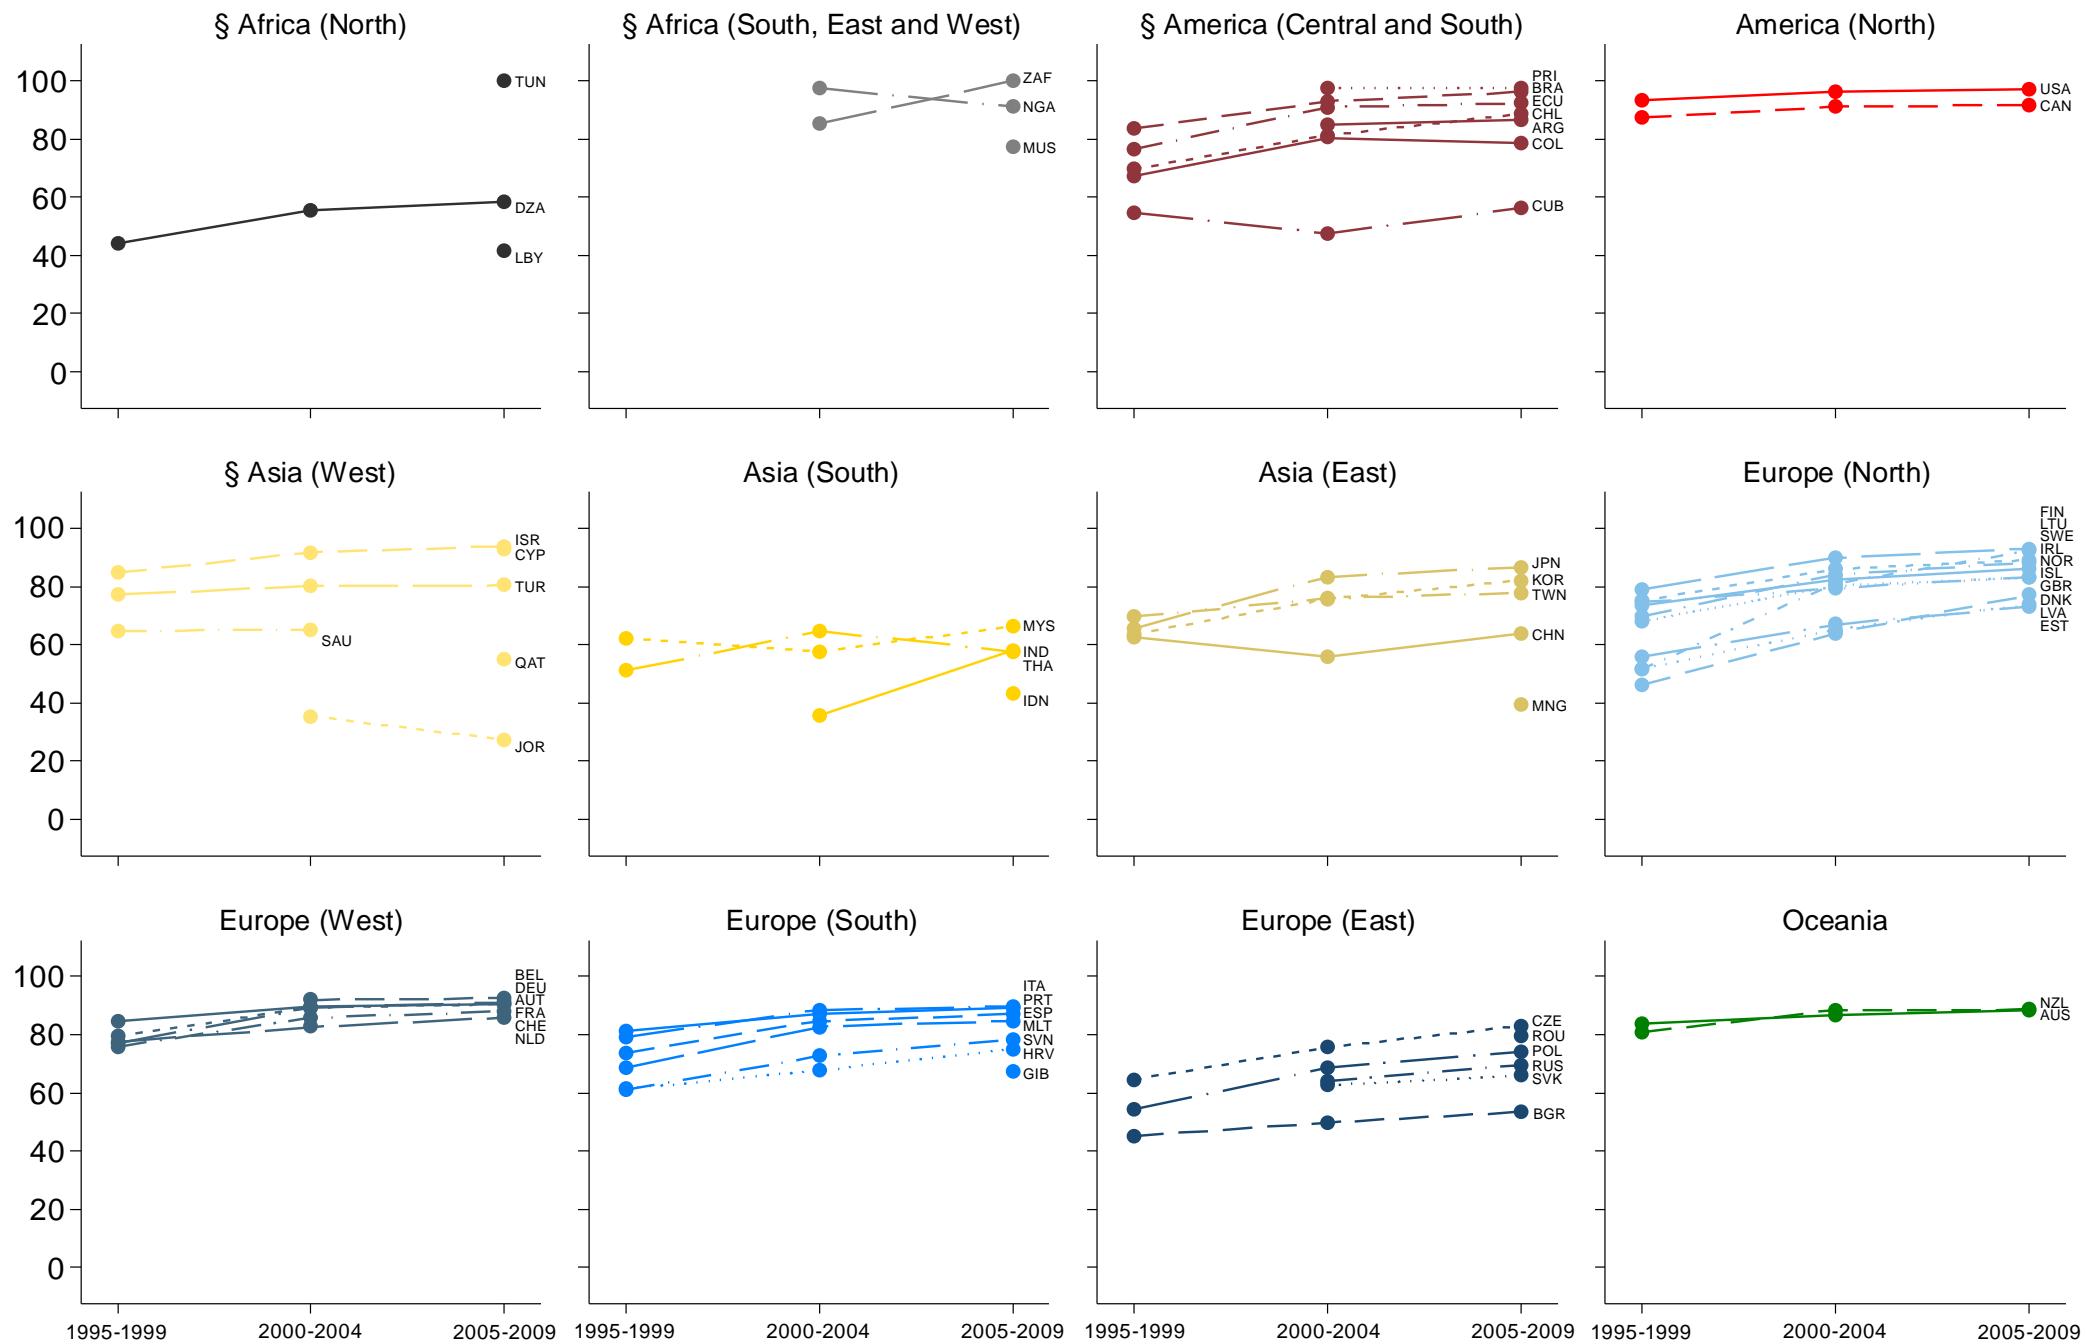

Web-figure 3: Cervical cancer – Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

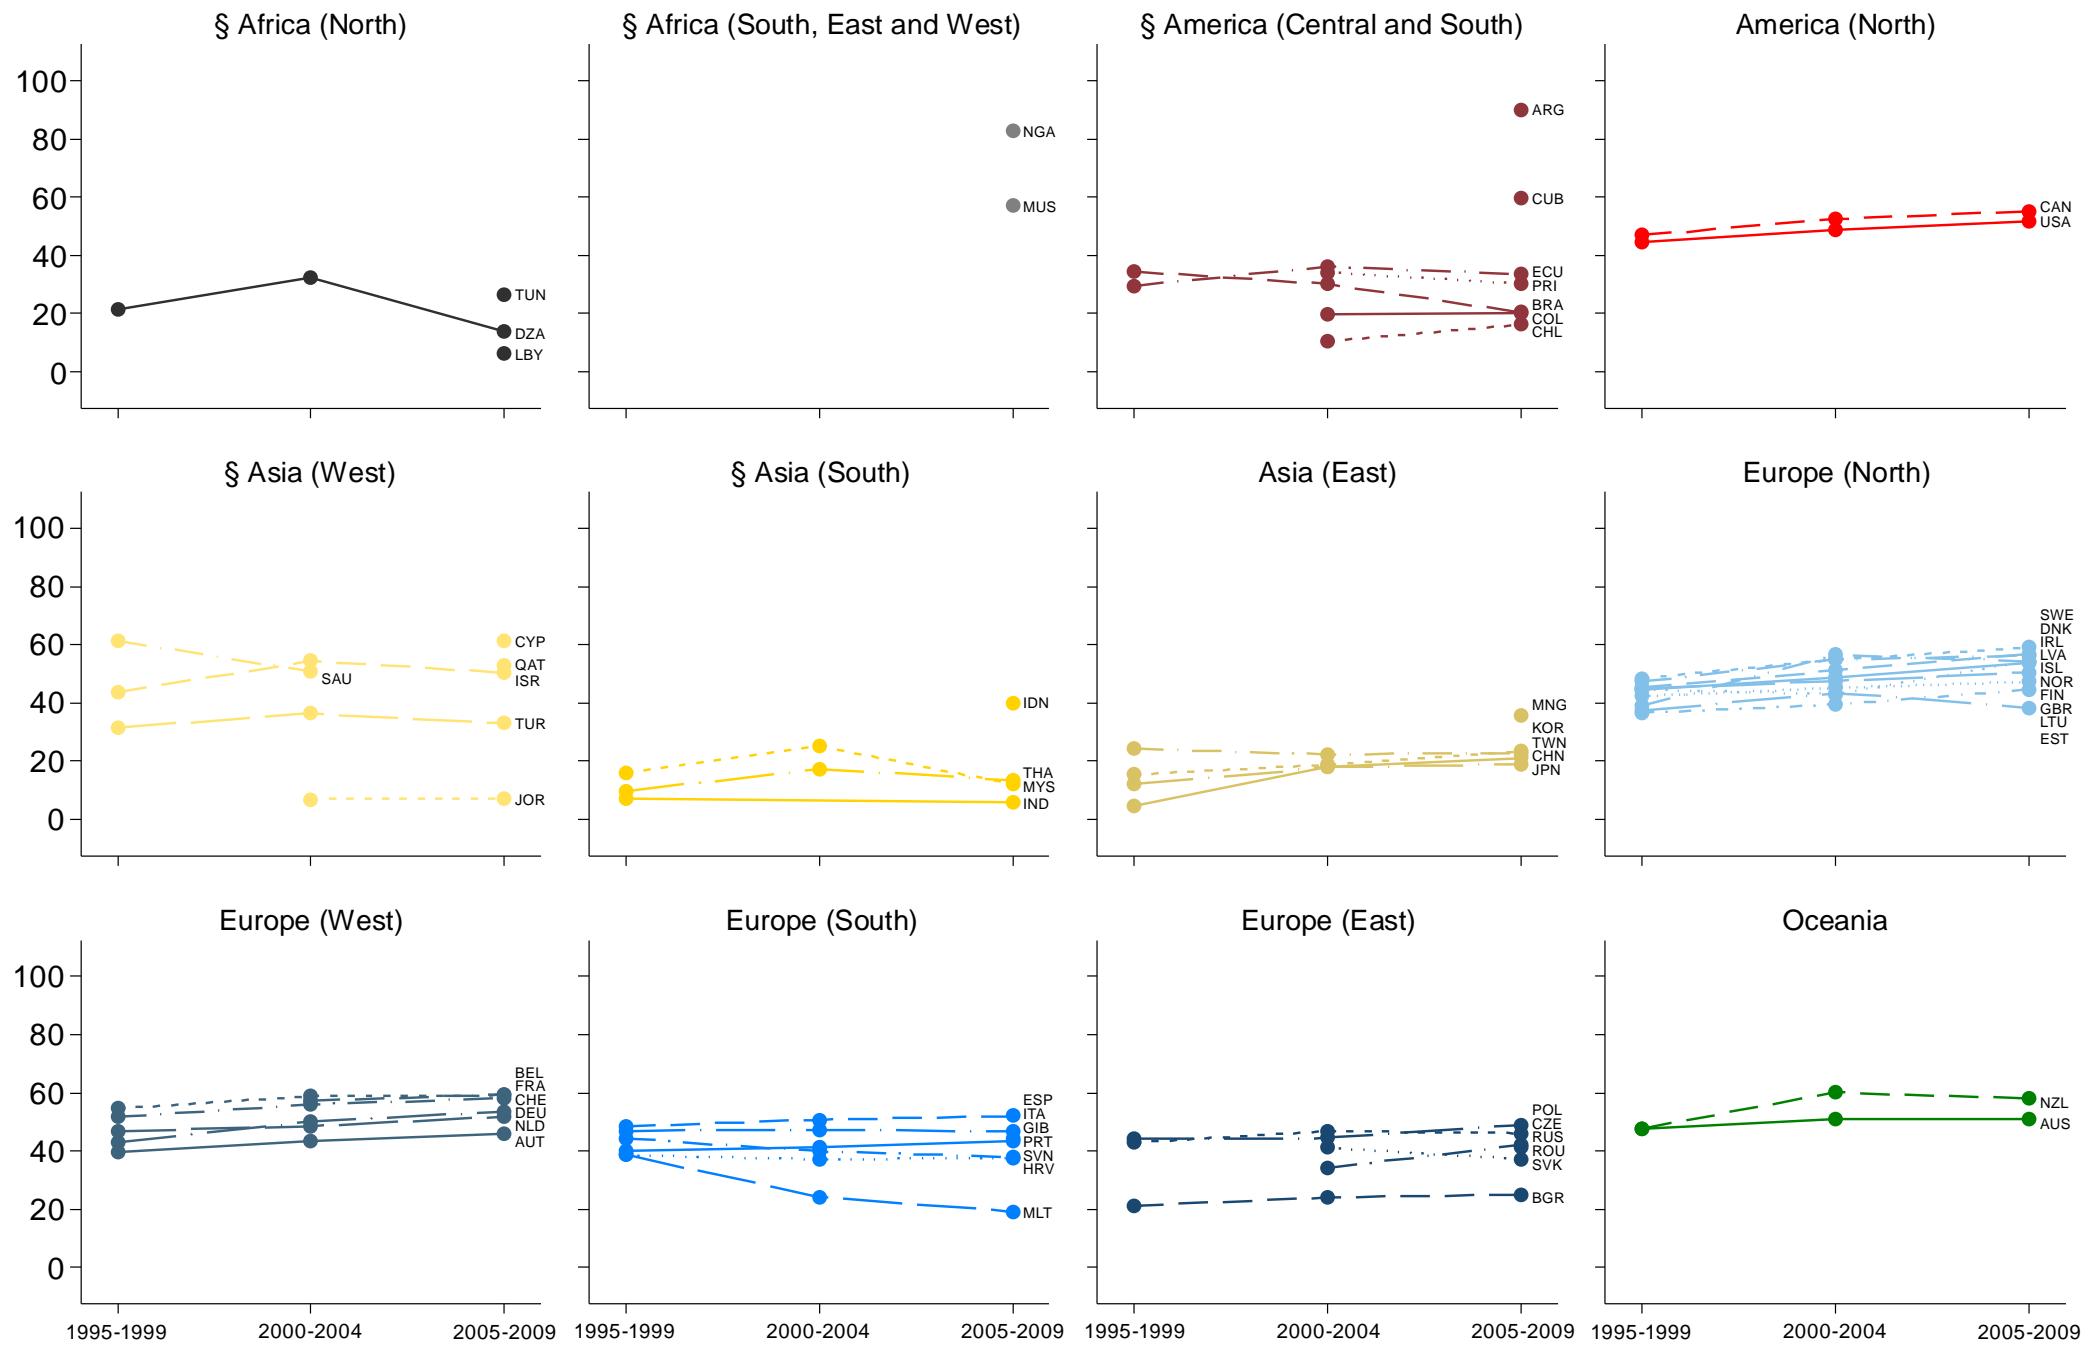

Web-figure 3: Ovarian cancer – Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

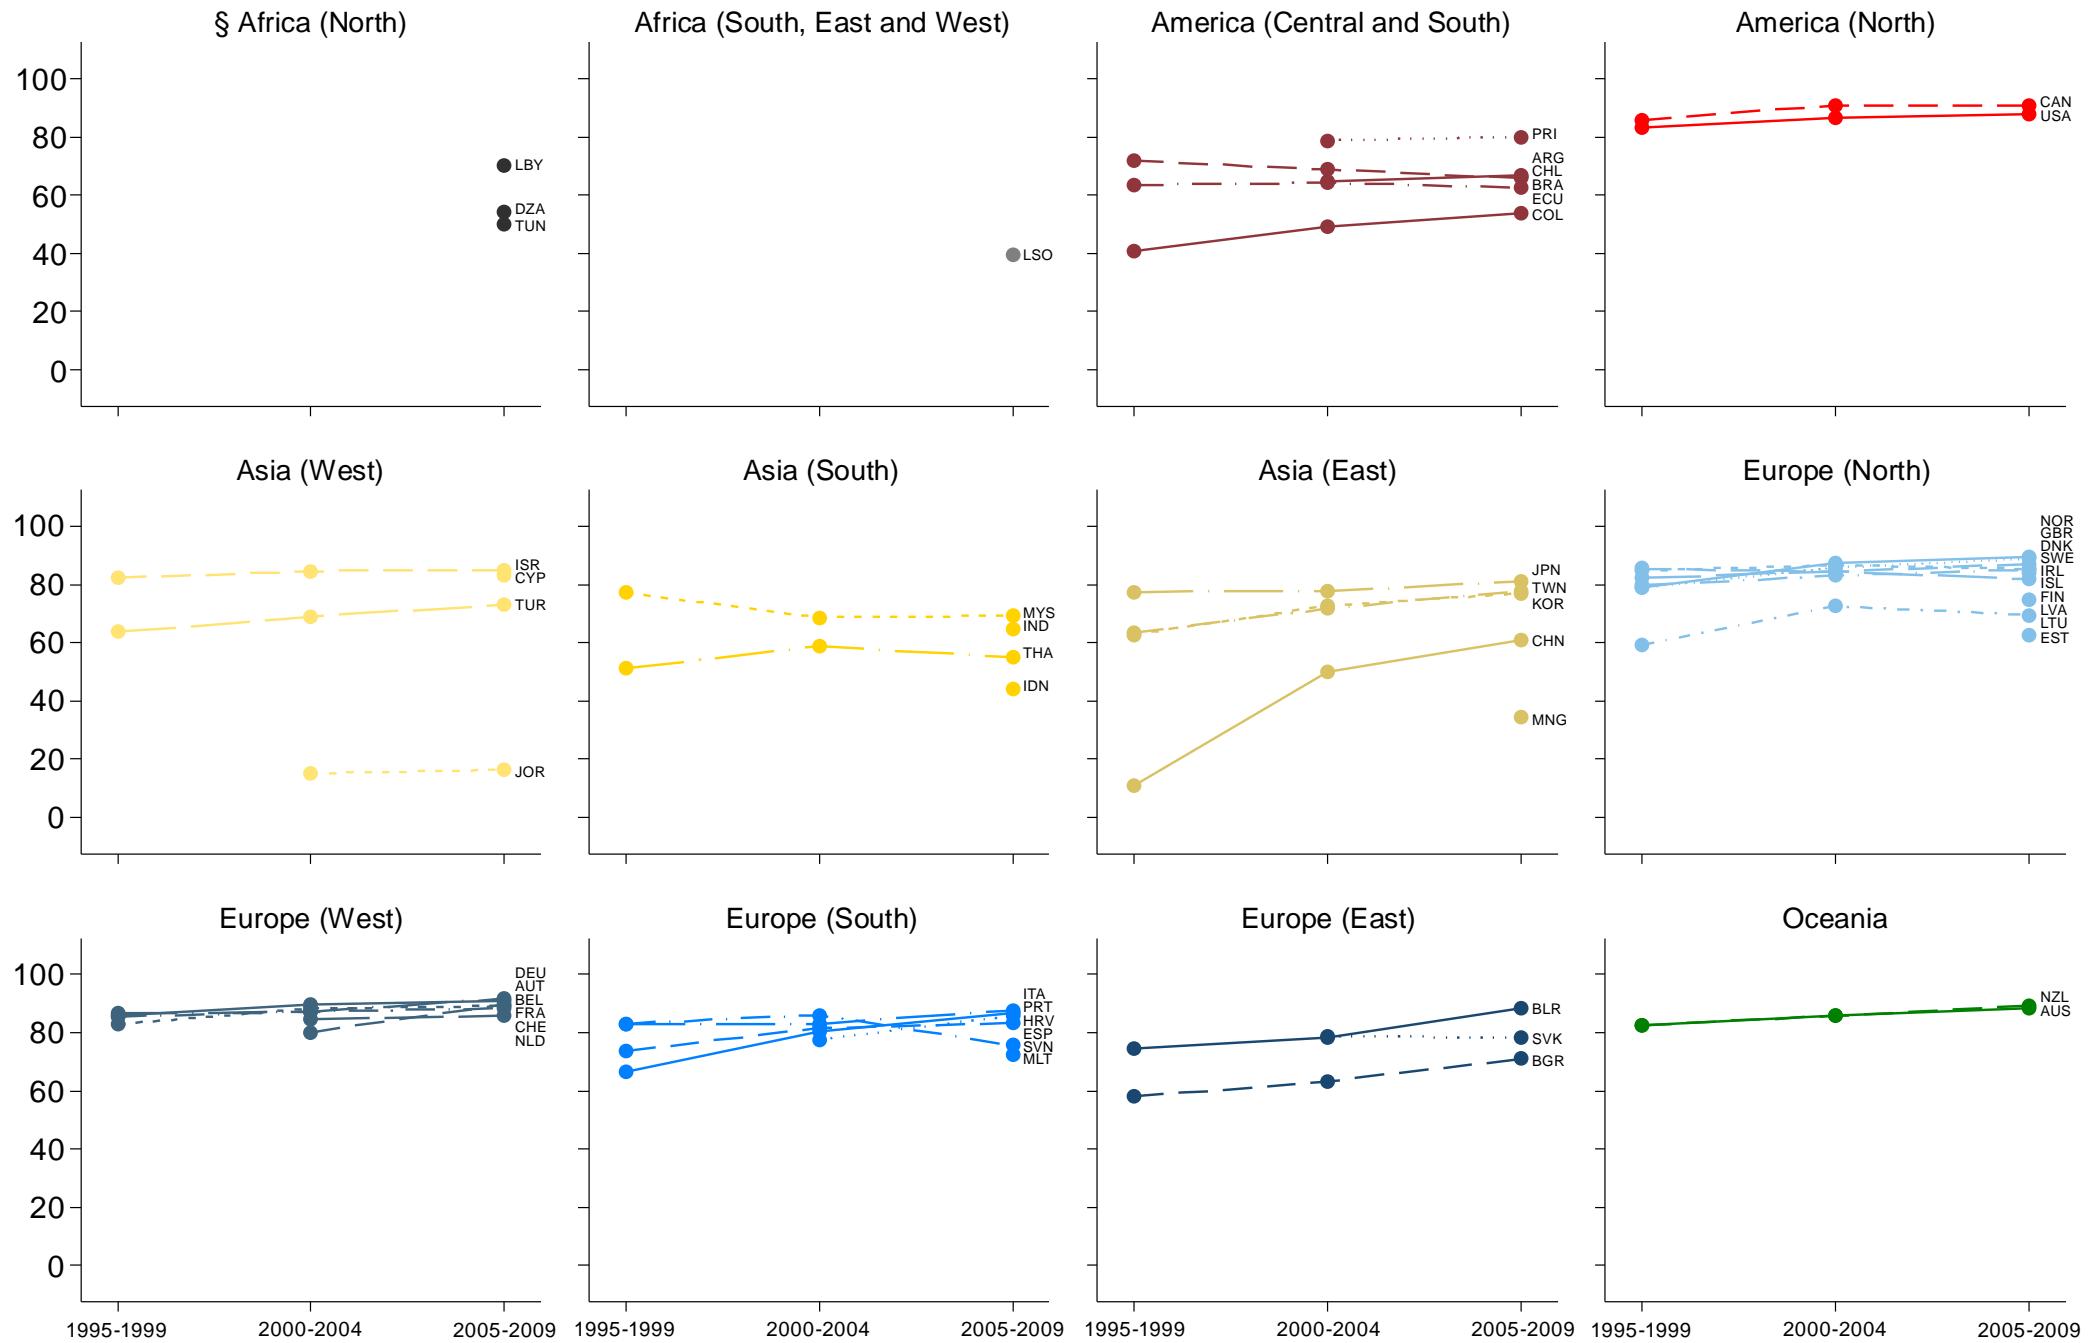

Web-figure 3: Prostate cancer – Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

Web-figure 3: Leukaemia in adults – Trends in age-standardised five-year net survival (%) for adults (15-99 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

Web-figure 3: Acute lymphoblastic leukaemia in children – Trends in age-standardised five-year net survival (%) for children (0-14 years) diagnosed during 1995-1999, 2000-2004 and 2005-2009, by continent (or continental region) and country.

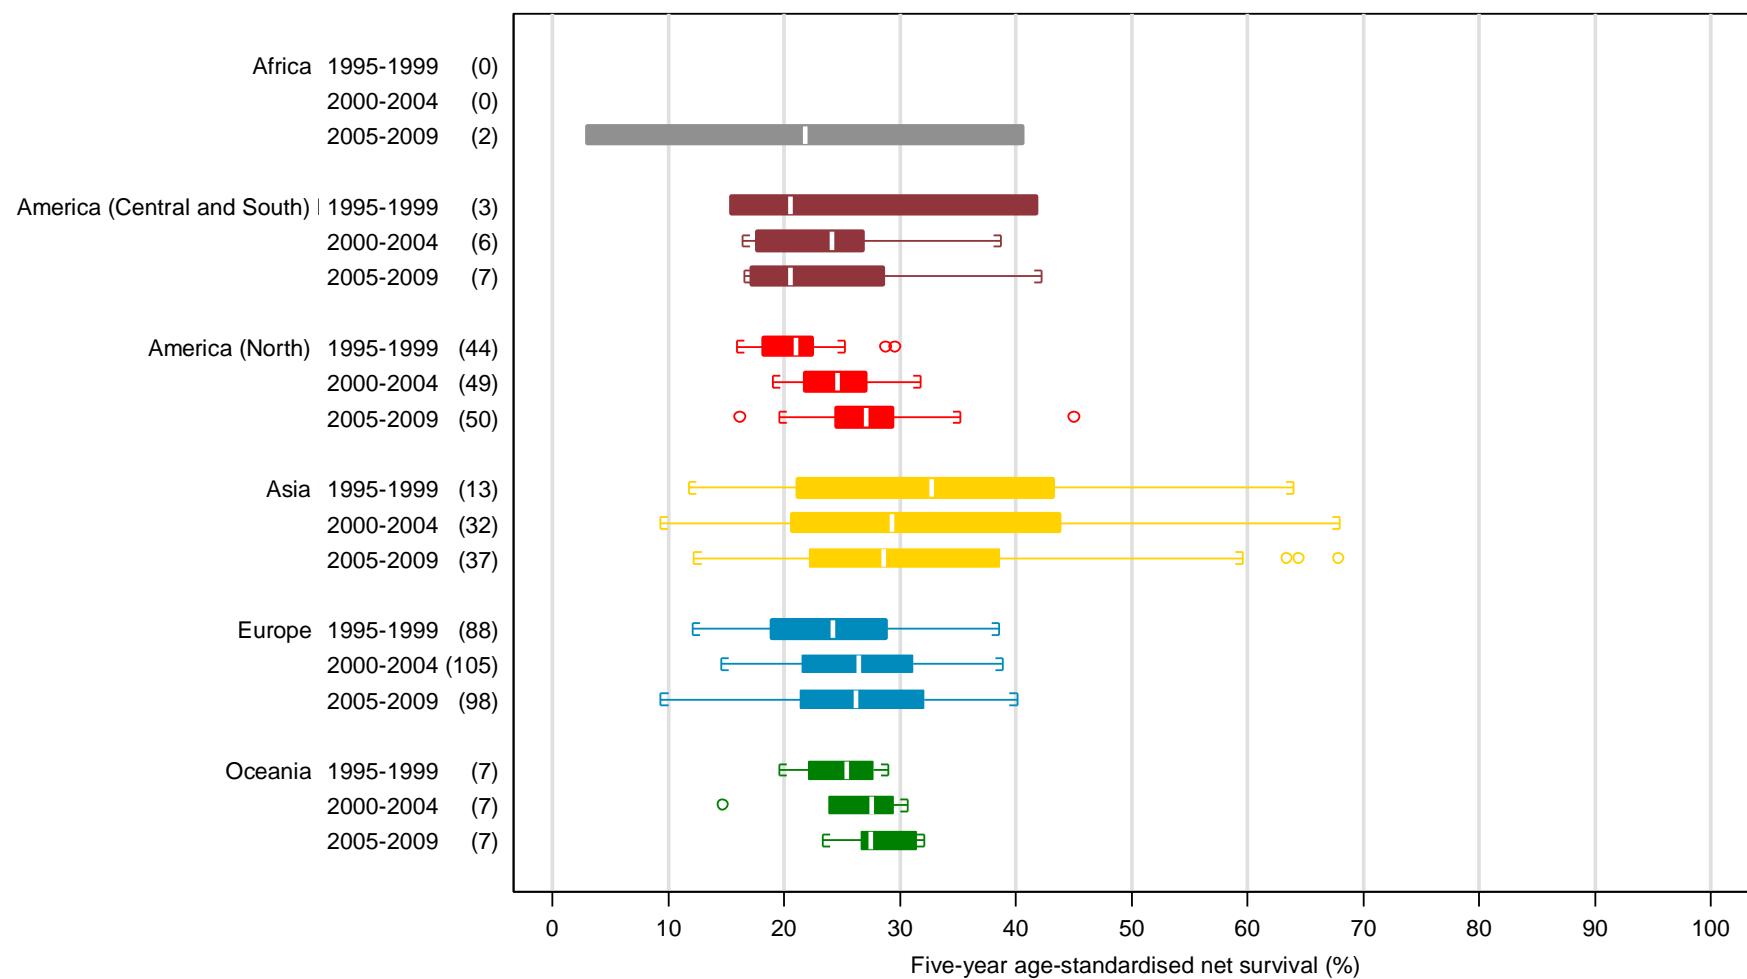

Web-figure 4

Range of five-year age-standardised net survival (%), adults (15-99 years) diagnosed with one of nine common malignancies, and children (0-14 years) diagnosed with acute lymphoblastic leukaemia (ALL) by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009):

- Stomach
- Colon
- Rectum
- Liver
- Lung
- Cervix
- Ovary
- Prostate
- Leukaemia in adults
- Acute lymphoblastic leukaemia in children

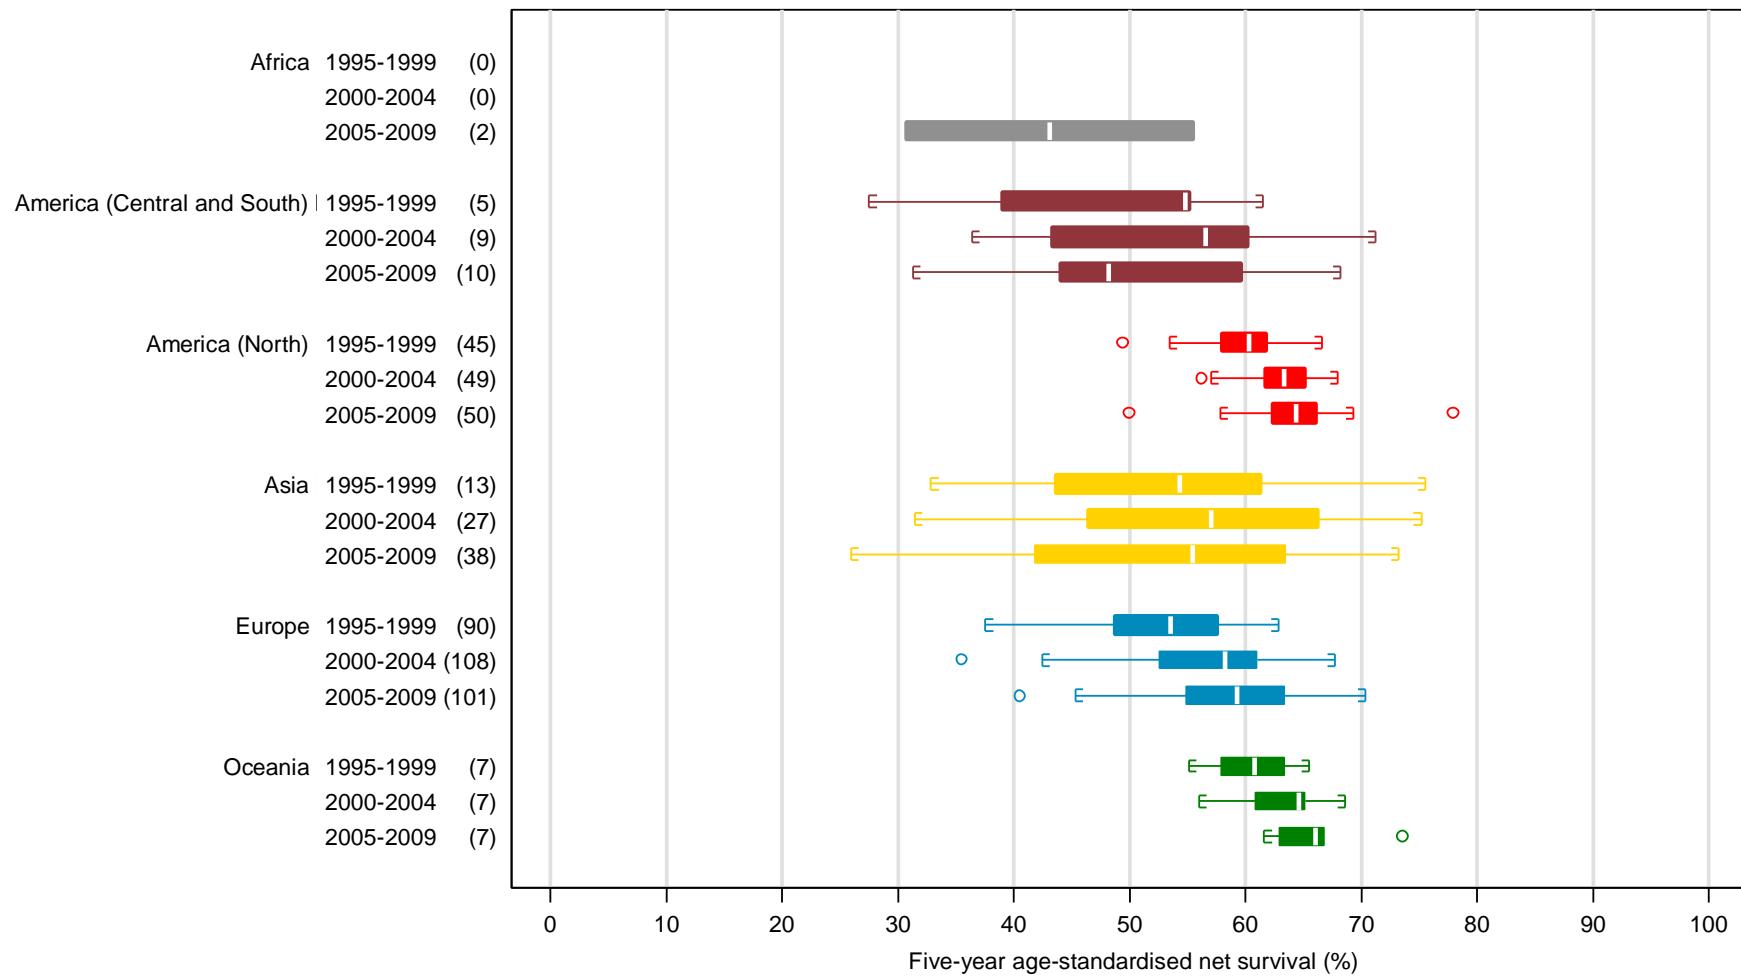

Each box-plot shows the range of survival estimates among all cancer registries for which suitable estimates could be obtained for patients diagnosed in a given calendar period in each continent. The number of registries included in each plot is shown in parentheses: registries for which survival estimates are considered less reliable are not included (see text). The vertical line inside each box marks the median survival estimate (the central value in the range of estimates, or 50th centile). The box covers the inter-quartile range (IQR) between the lower and upper quartiles (25th and 75th centiles). Where there are only a few widely scattered estimates, the median may be close to the lower or upper quartile. The extreme limits of the box-plot are $1.5 \times \text{IQR}$ below the lower quartile and $1.5 \times \text{IQR}$ above the upper quartile. Open circles indicate 'outlier' values, outside this range.

Web-figure 4: Stomach cancer – Global range of age-standardised five-year net survival (%) estimates among 213 cancer registry populations in 50 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): adults (15-99 years) [Survival estimates considered less reliable are not included: see text]

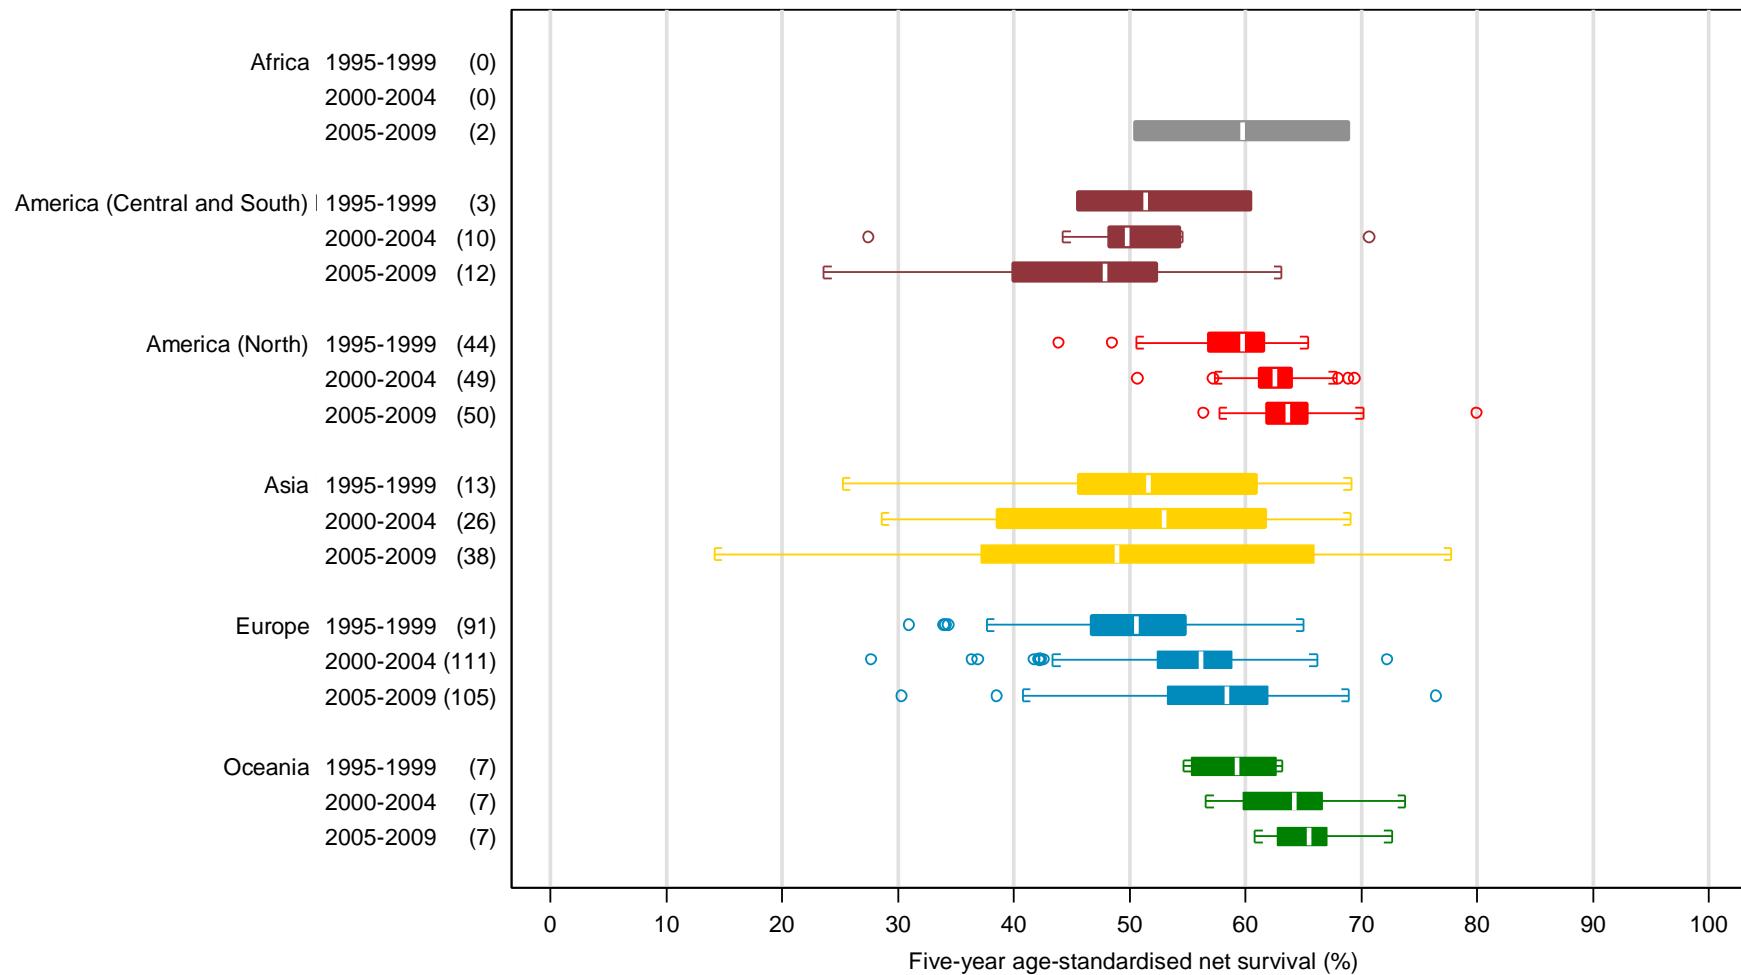

See front page of this appendix for citation

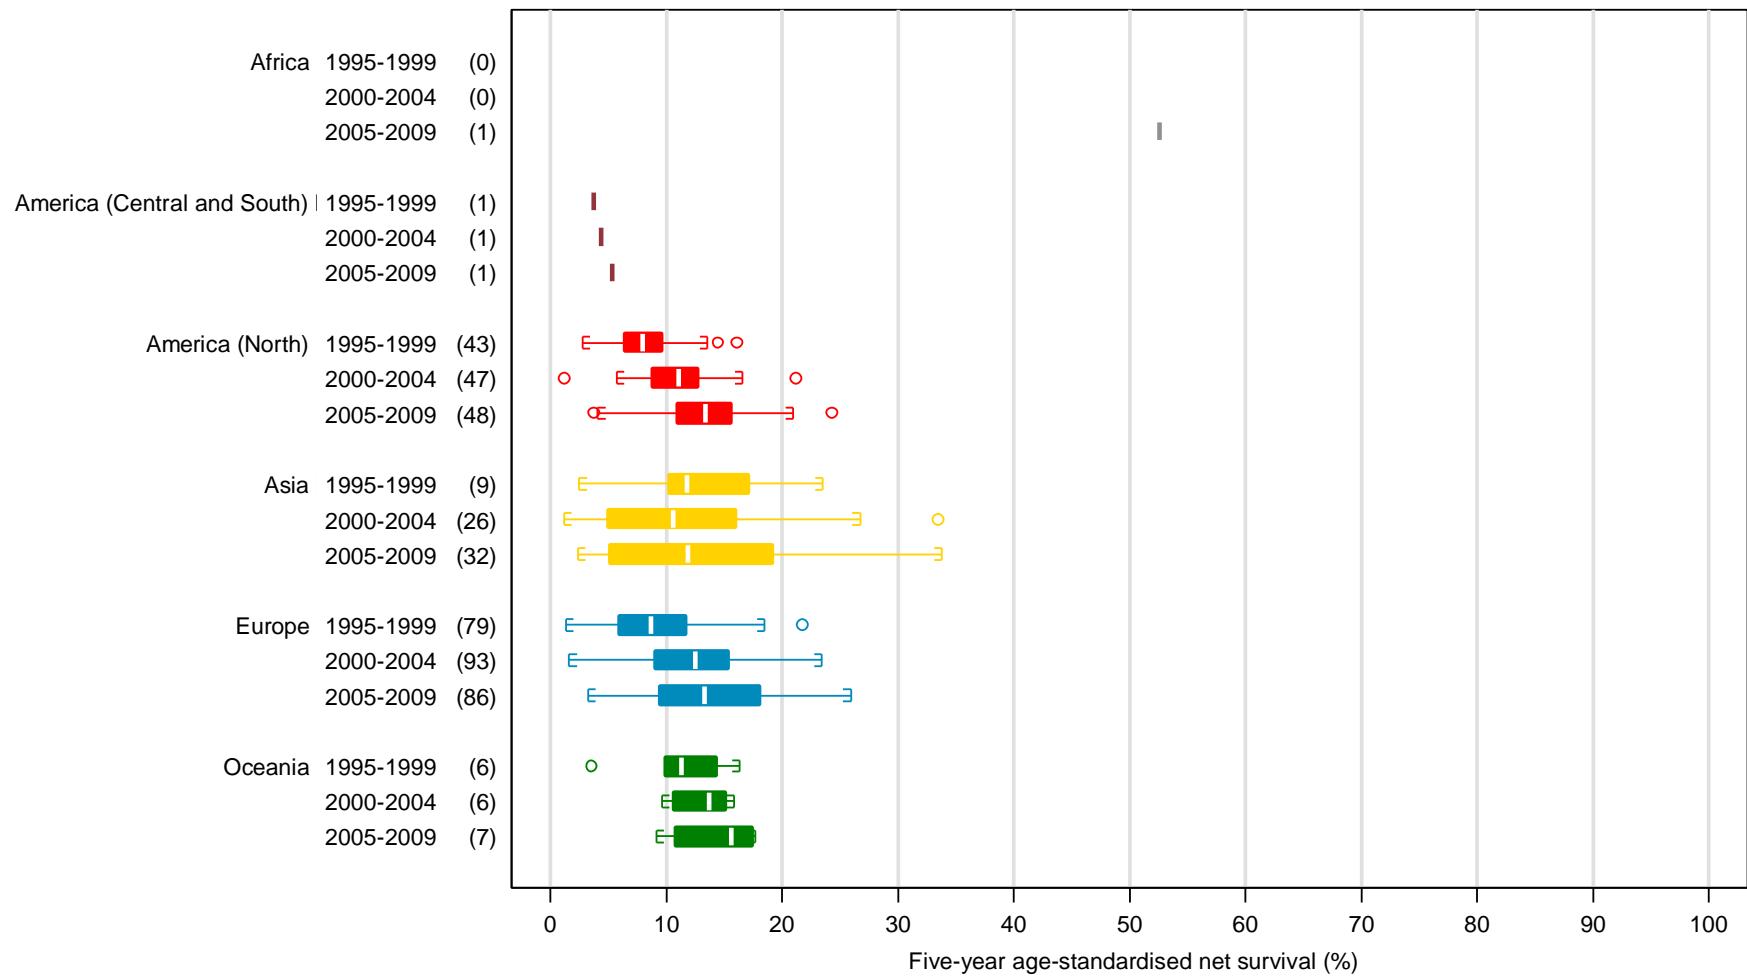

Web-figure 4: Colon cancer – Global range of age-standardised five-year net survival (%) estimates among 220 cancer registry populations in 52 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): adults (15-99 years) [Survival estimates considered less reliable are not included: see text]

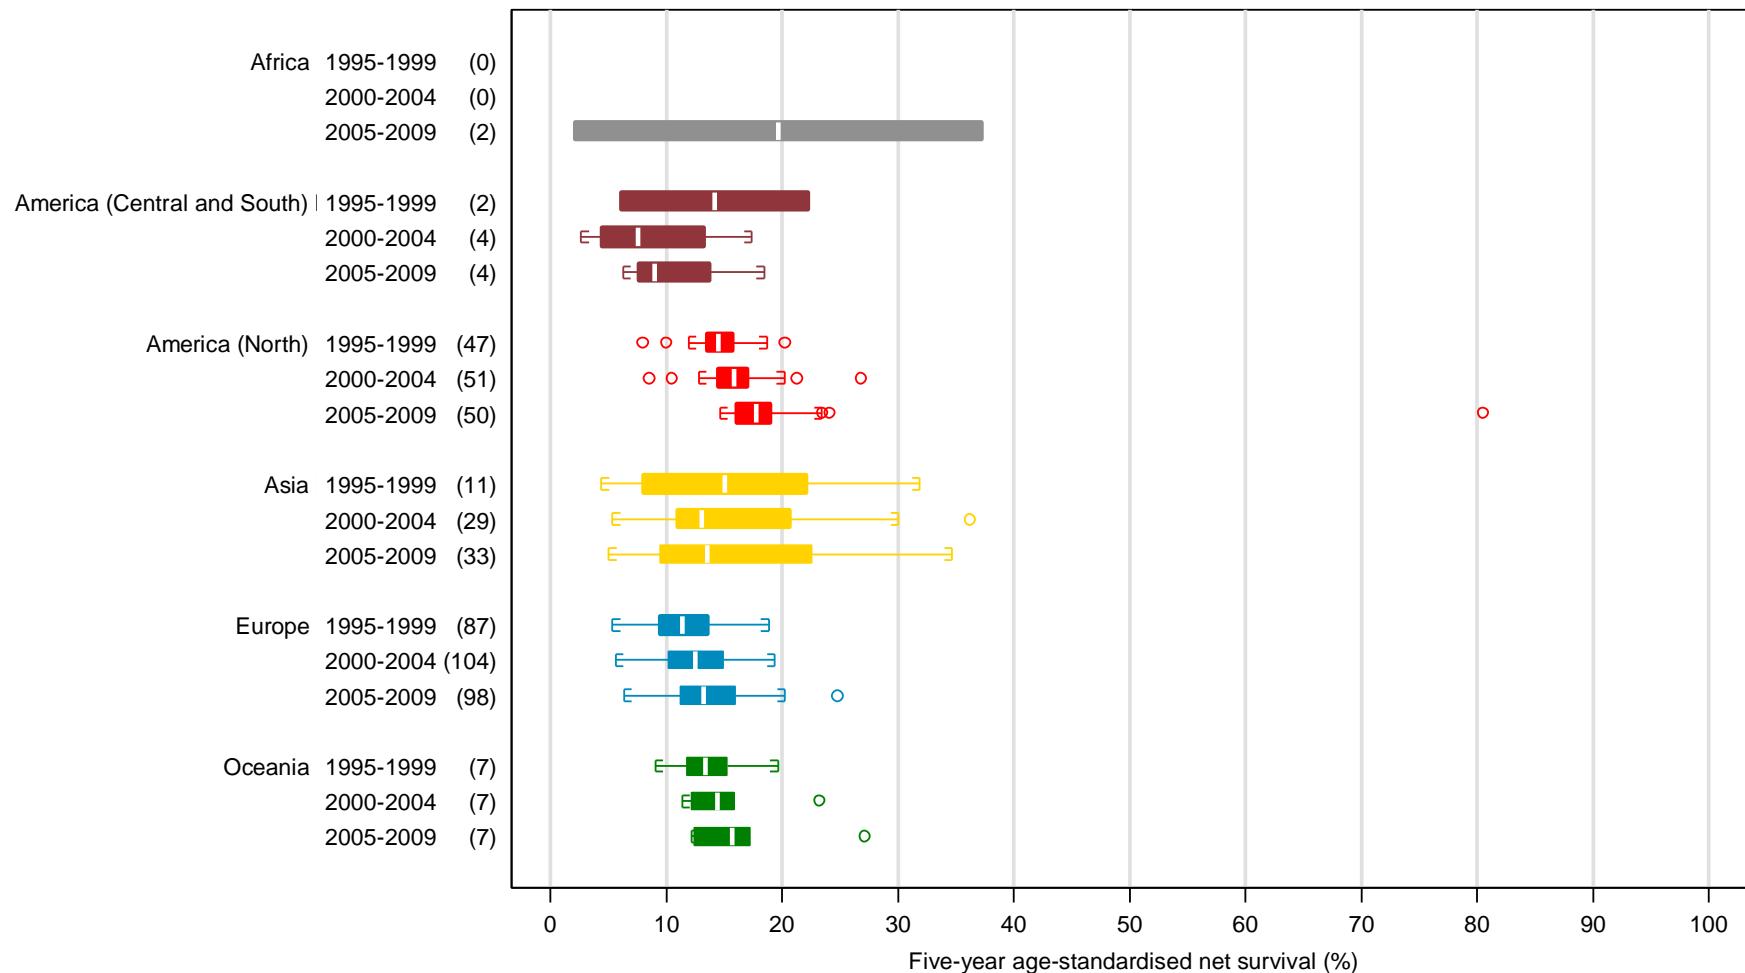

Web-figure 4: Rectal cancer – Global range of age-standardised five-year net survival (%) estimates among 226 cancer registry populations in 54 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): adults (15-99 years) [Survival estimates considered less reliable are not included: see text]

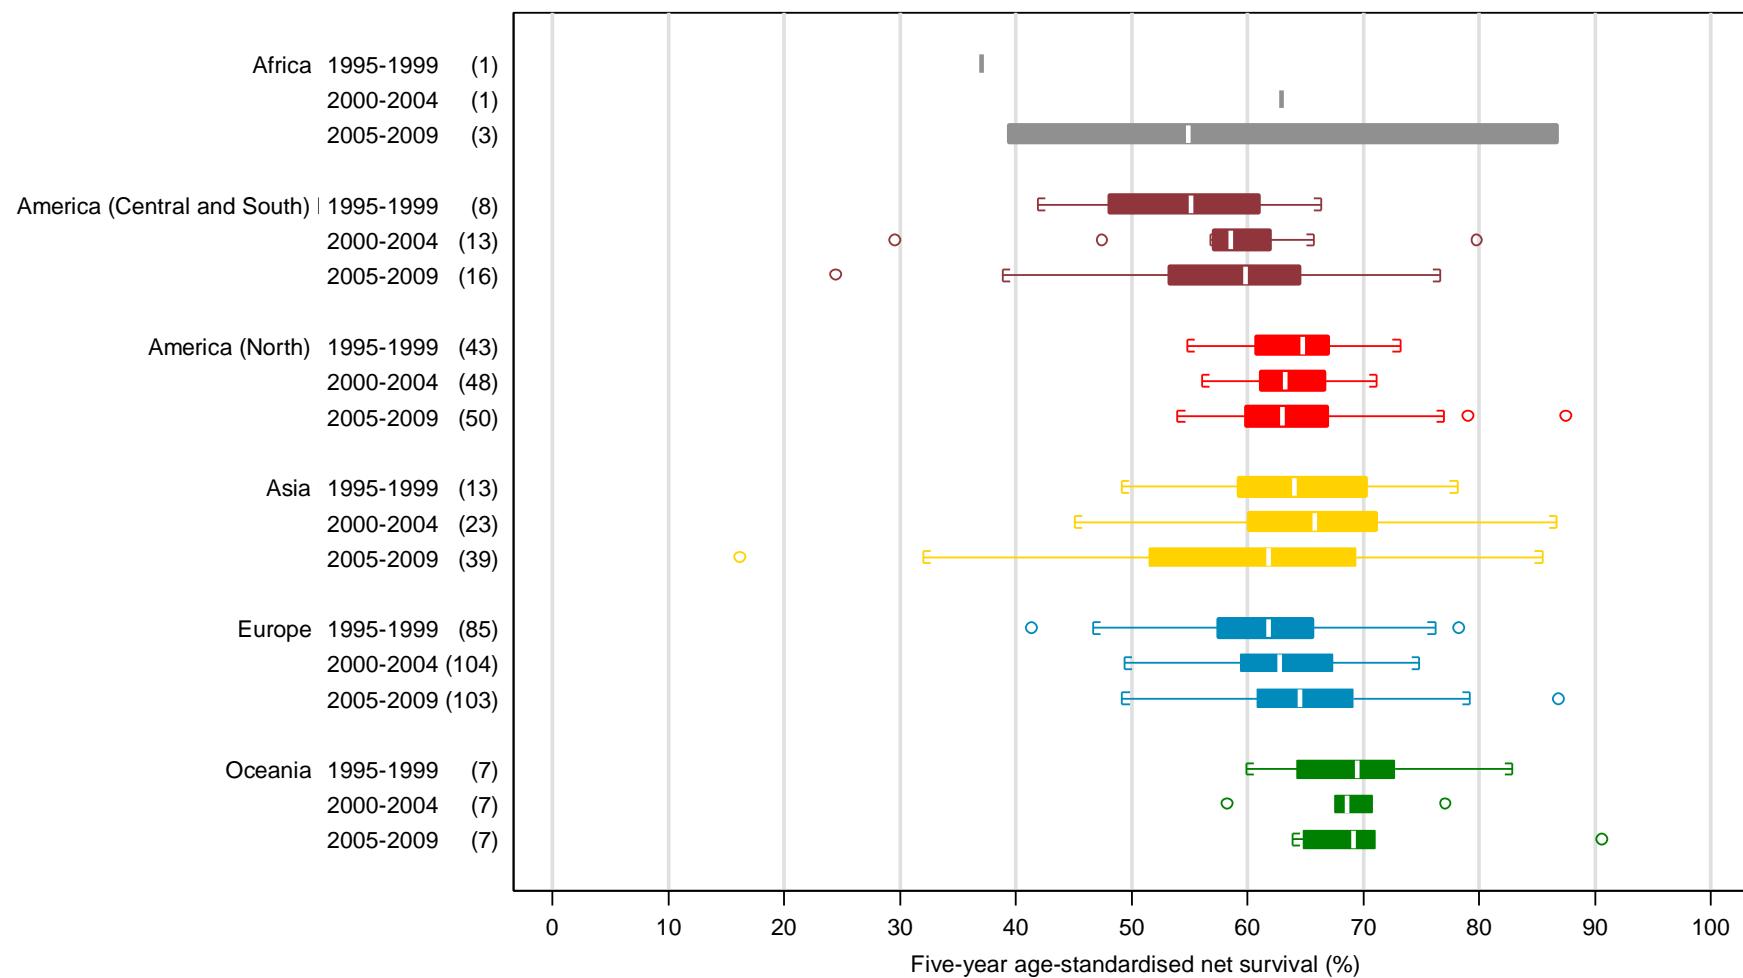

Web-figure 4: Liver cancer – Global range of age-standardised five-year net survival (%) estimates among 185 cancer registry populations in 38 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): adults (15-99 years) [Survival estimates considered less reliable are not included: see text]

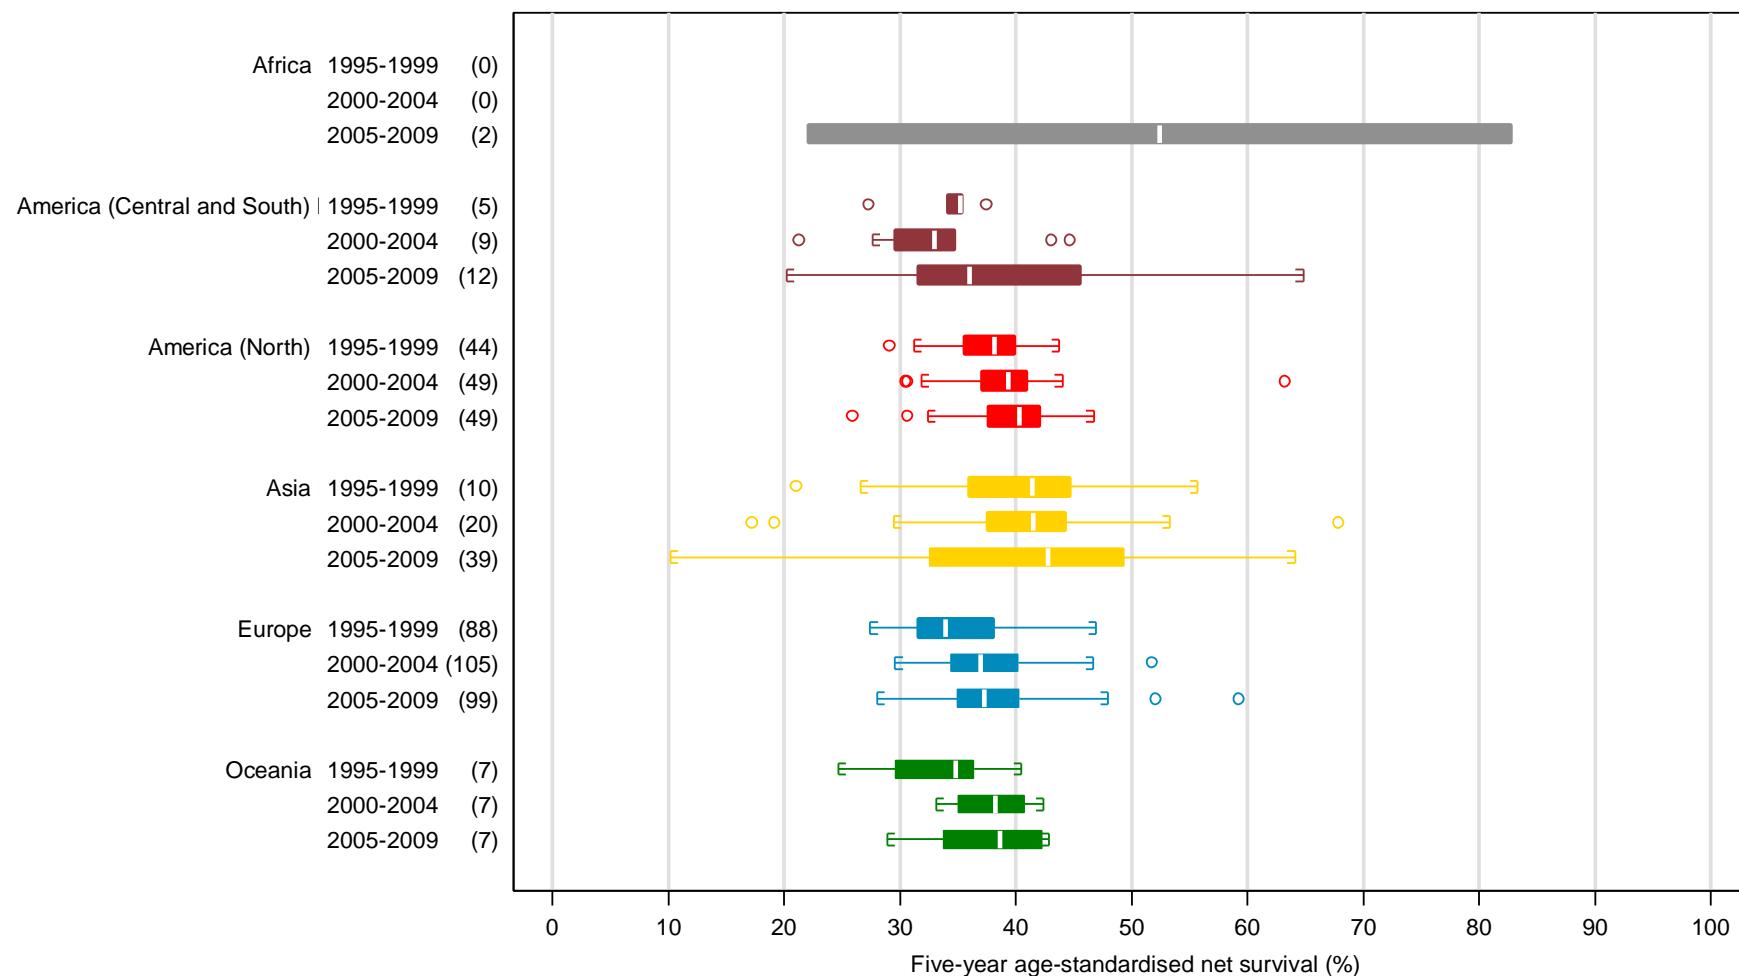

Web-figure 4: Lung cancer – Global range of age-standardised five-year net survival (%) estimates among 204 cancer registry populations in 48 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): adults (15-99 years) [Survival estimates considered less reliable are not included: see text]

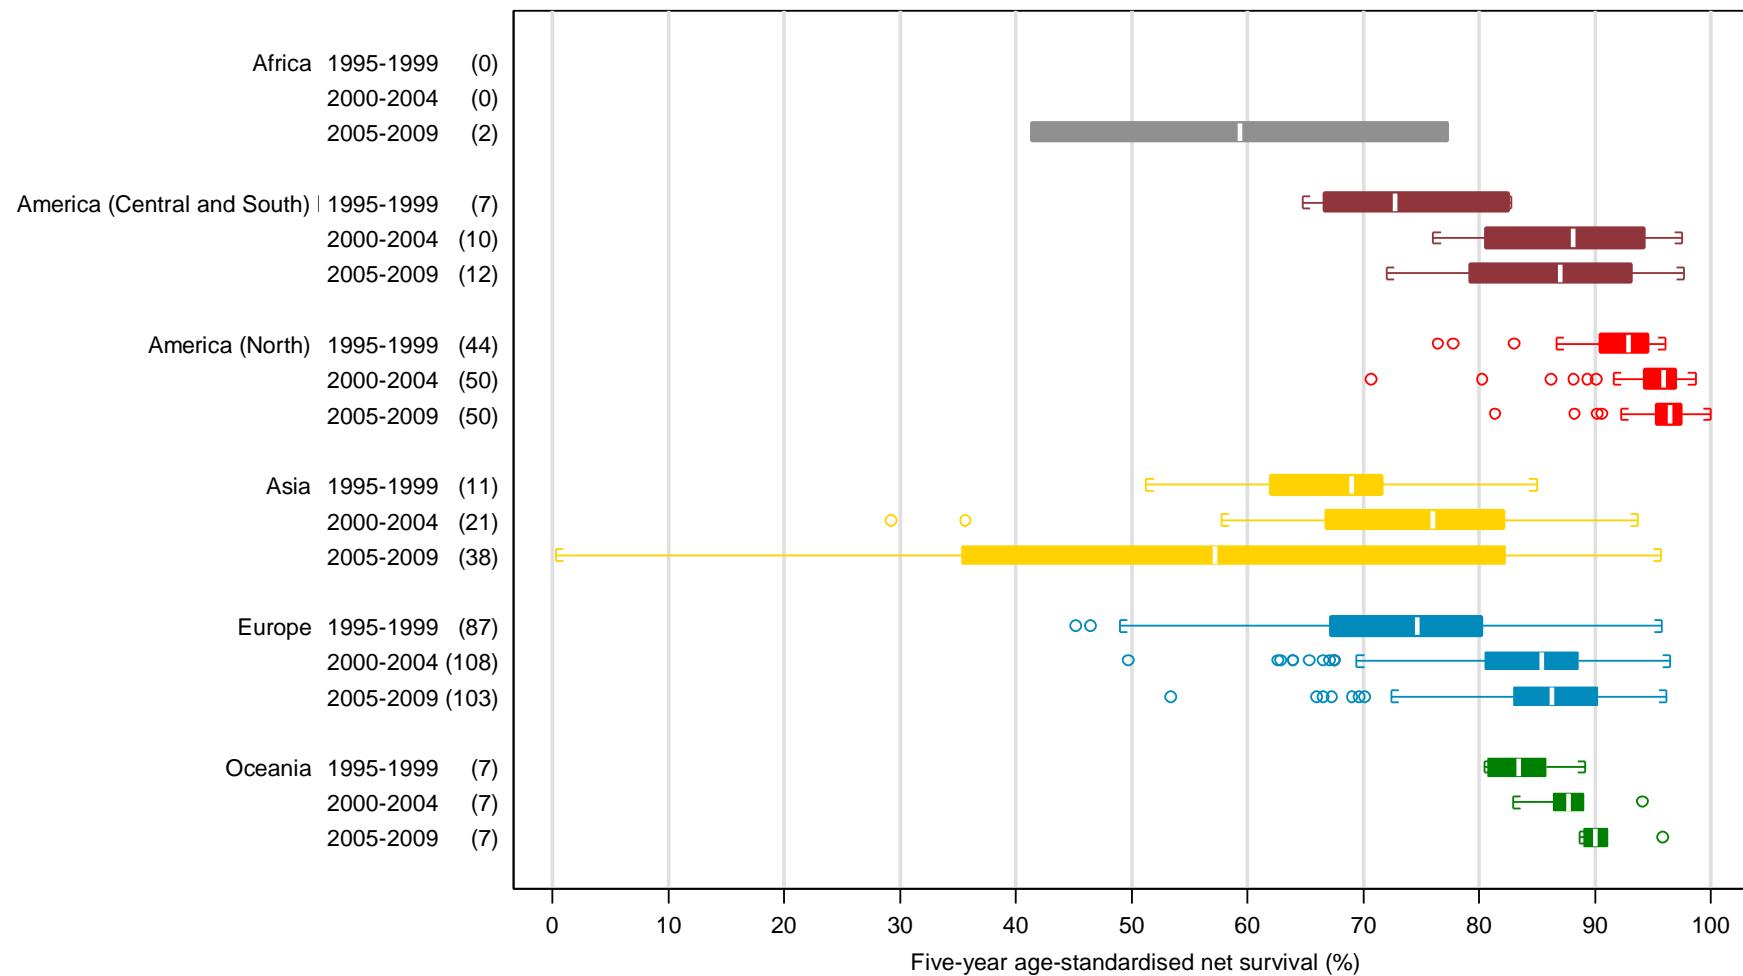

Web-figure 4: Cervical cancer – Global range of age-standardised five-year net survival (%) estimates among 229 cancer registry populations in 56 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): women (15-99 years) [Survival estimates considered less reliable are not included: see text]

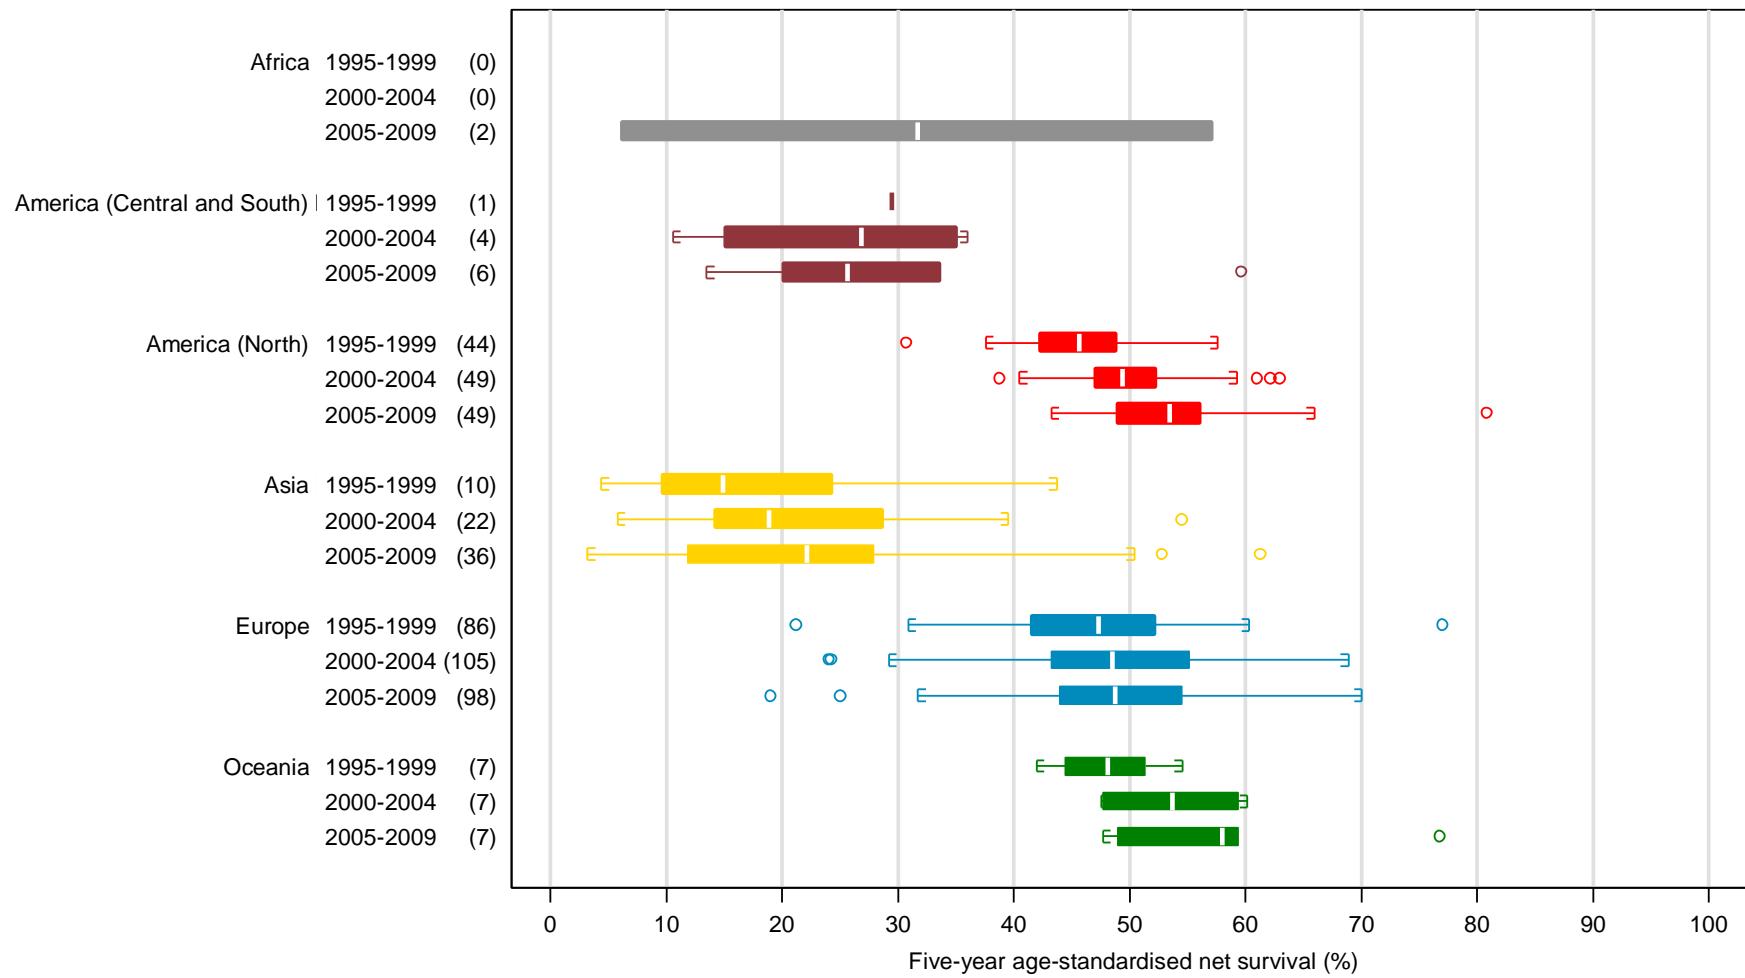

Web-figure 4: Ovarian cancer – Global range of age-standardised five-year net survival (%) estimates among 219 cancer registry populations in 55 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): women (15-99 years) [Survival estimates considered less reliable are not included: see text]

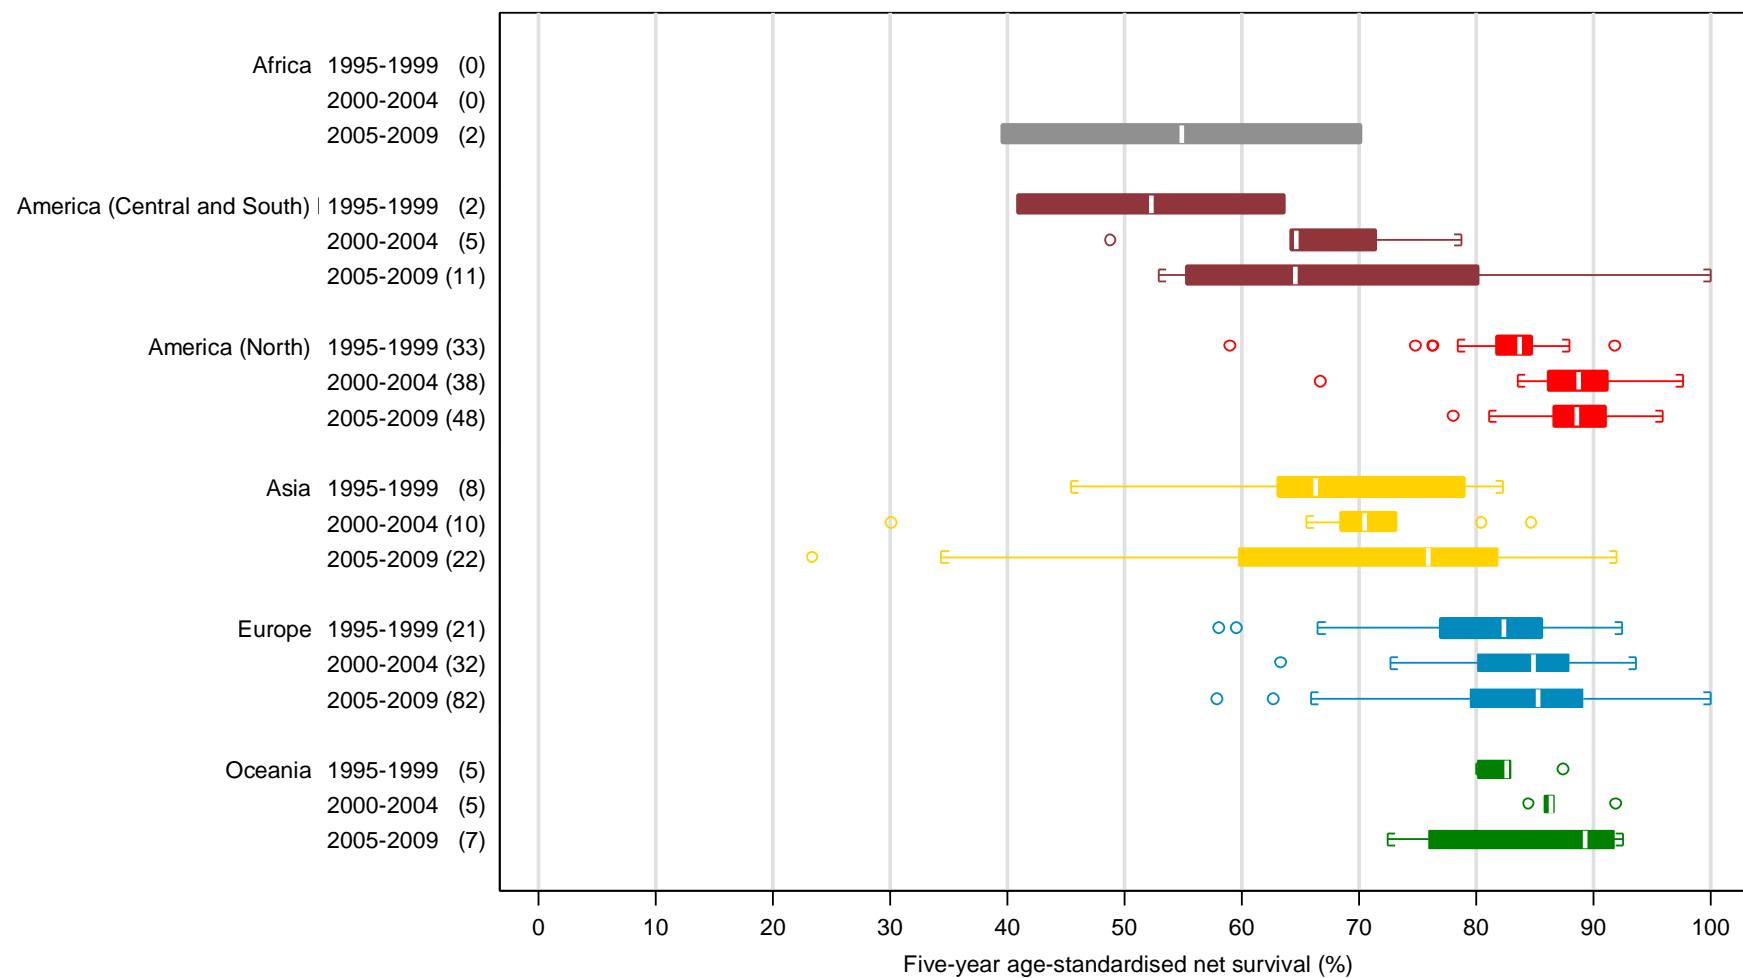

Web-figure 4: Prostate cancer – Global range of age-standardised five-year net survival (%) estimates among 223 cancer registry populations in 54 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): men (15-99 years) [Survival estimates considered less reliable are not included: see text]

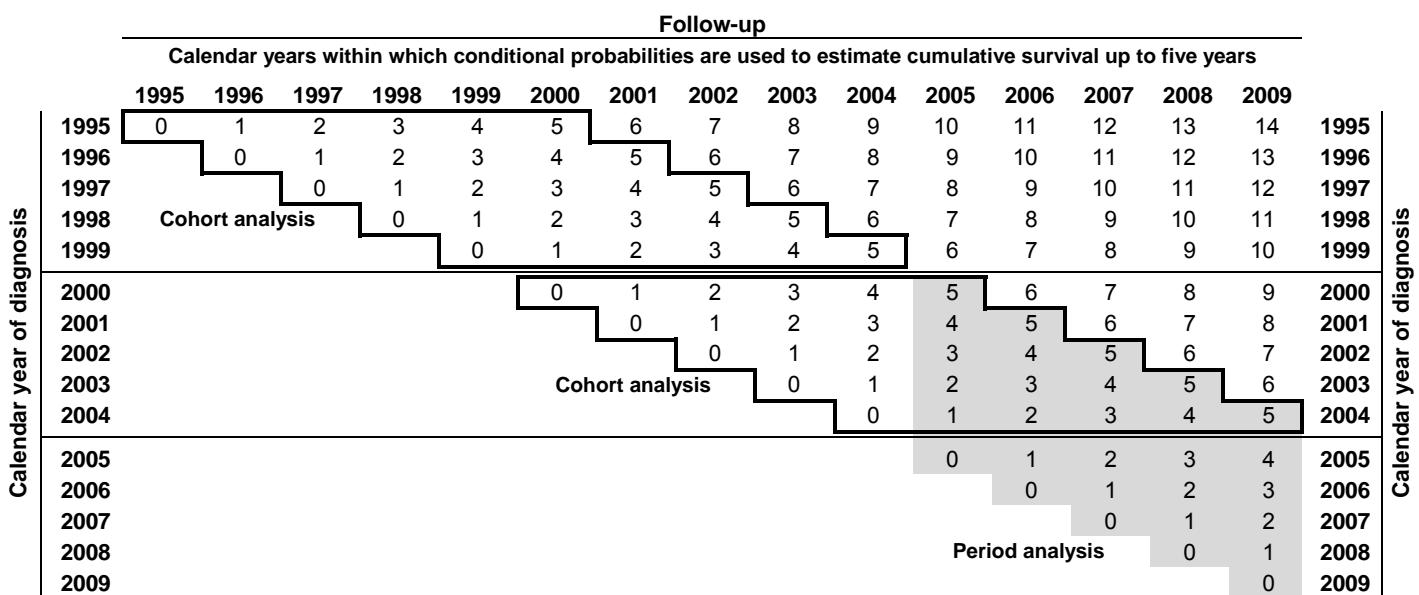

Web-figure 4: Leukaemia in adults – Global range of age-standardised five-year net survival (%) estimates among 210 cancer registry populations in 53 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): adults (15-99 years) [Survival estimates considered less reliable are not included: see text]

Web-figure 4: Acute lymphoblastic leukaemia in children – Global range of age-standardised five-year net survival (%) estimates among 175 cancer registry populations in 49 countries, by continent and calendar period of diagnosis (1995-1999, 2000-2004, 2005-2009): children (0-14 years) [Survival estimates considered less reliable are not included: see text]

Web-annex 1: Structure of survival analyses, patients diagnosed 1995-2009

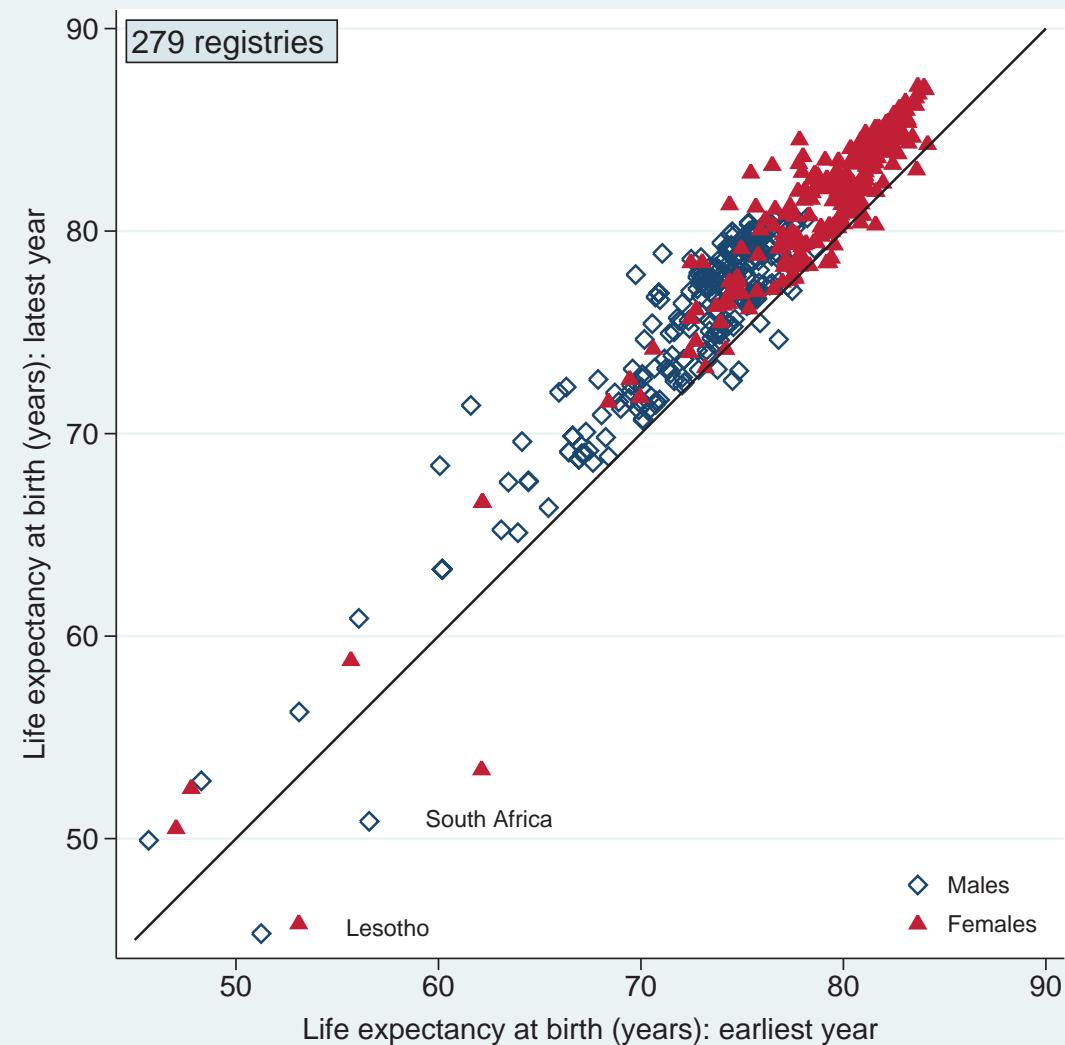

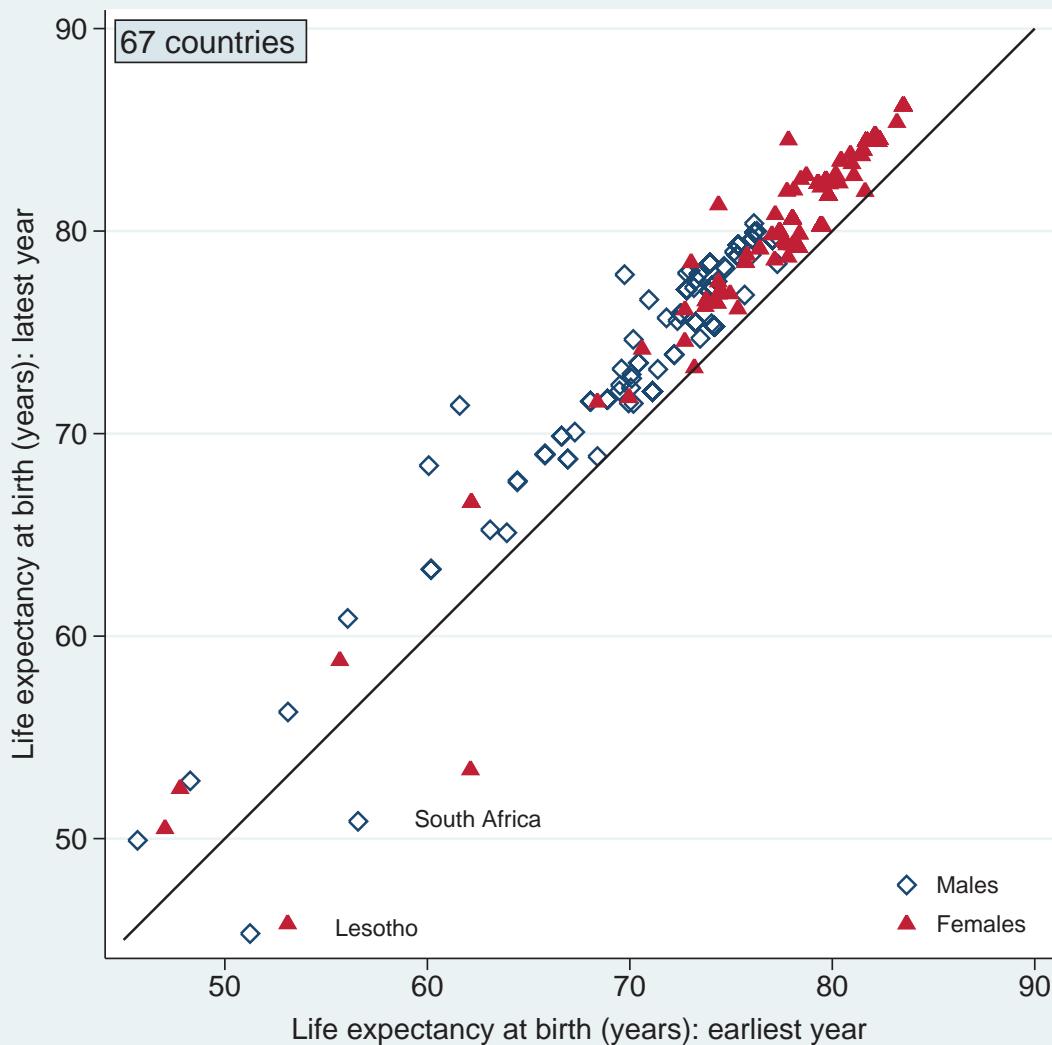

Patients diagnosed in a given year between 1995 and 2009 may be followed up in successive years until the end of 2009 (or later). For each year of diagnosis (row) the numbers in the cells indicate the minimum number of complete years of follow-up available for patients who survived to the end of a given year (column).

Three calendar periods of diagnosis are defined. Patients diagnosed during 1995-1999 and 2000-2004 all have a potential follow-up of at least 5 years by the end of 2009. Their survival can be estimated in classical cohort fashion: conditional probabilities of survival to the end of a given year are multiplied within successive calendar years (along the row) to obtain a cumulative probability of survival up to five years (solid outlines). For patients who have been followed up during all or part of the calendar interval 2005-2009, a period estimate of survival is obtained by multiplying the conditional probabilities of survival within each calendar year (column) for patients diagnosed during 2000-2009 (shaded area).
