

Figure S3 Repeated exposures to *A. fumigatus* spores stimulate expansion of adaptive immune response in the draining mediastinal lymph nodes (MLNs) A. Expansion profile of various adaptive cells in the MLNs and the cytokine expression profile of **B.** CD4⁺ and **C.** CD8⁺ T cell populations. Exposure groups - (white bars) Control, (grey bars) 10⁴ spores, (black bars) 10⁵ spores. For all graphs, * $p < 0.05$, ** $p < 0.0001$ and $n = 7-10$ mice/group.
